

HOLEYWOOD STUDIO

PRESENTS:

3D Holey Wood Wall and Ceiling Planks

“Holey Wood” wall and ceiling planks are made with a new generation material, which reproduces a 350-year old structure of wood on molecular level. We applied a special patented thermo-treatment technology for aging a wood. Look at the molecular structure of wood under microscope below: the cell structure of thermo-treated wood is the same as for a 350-years old piece of wood.

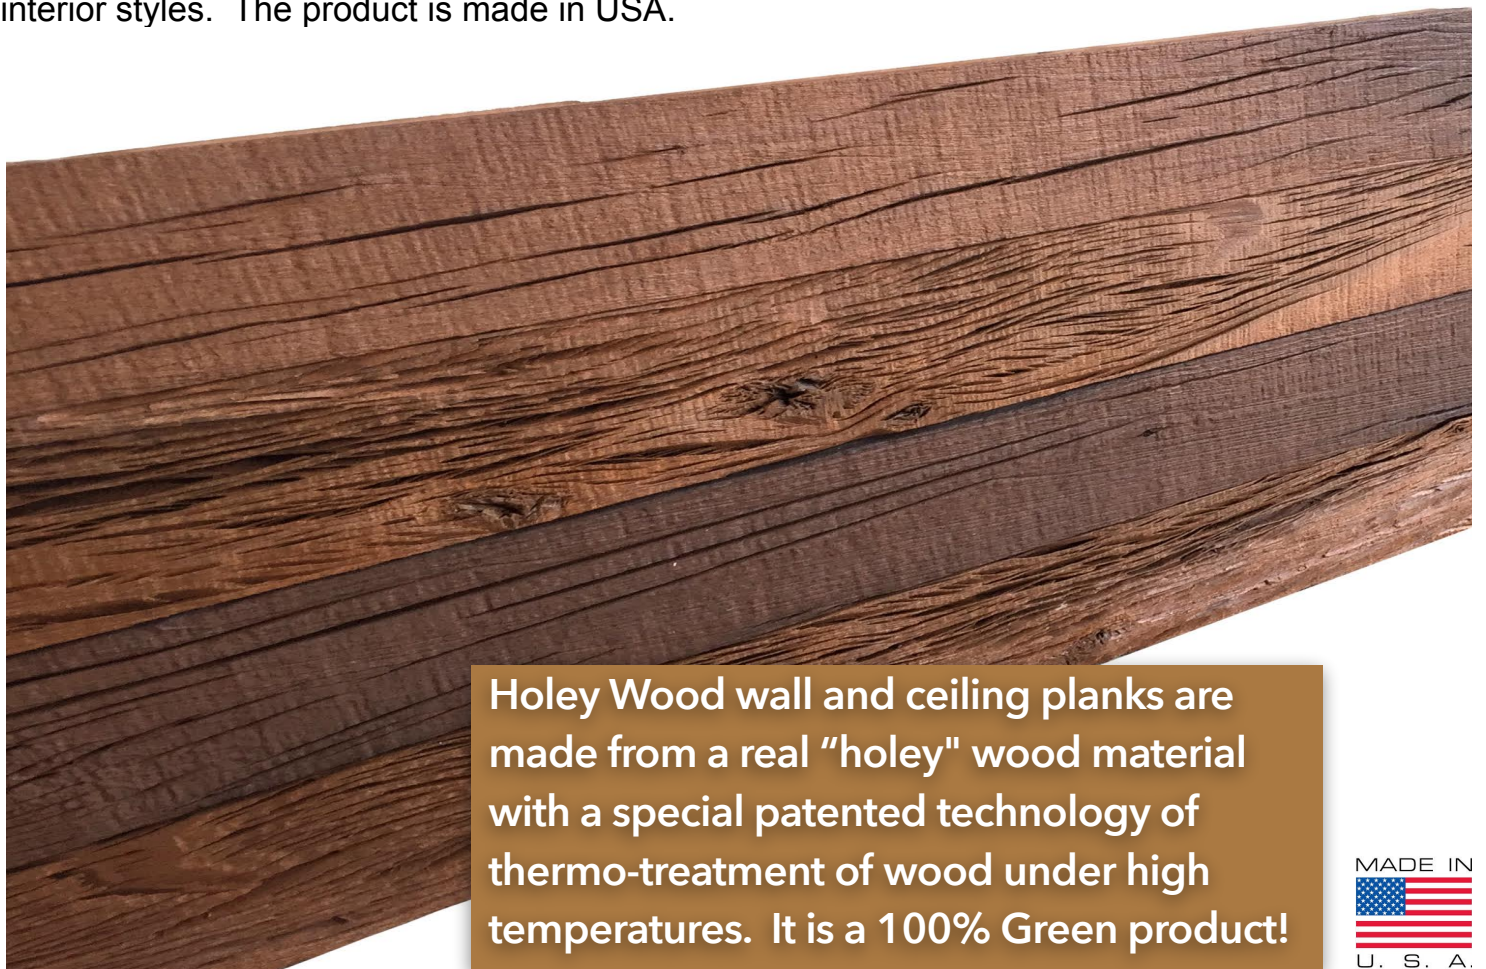

Regular wood

Thermo-treated wood

350-years old wood

The “magic” came to our life with these 3D Holey Wood wall paneling. It is a real old-wood product, which creates a unique design solution for reclaimed lumber and old-wood fashion interior styles. The product is made in USA.

Holey Wood wall and ceiling planks are made from a real “holey” wood material with a special patented technology of thermo-treatment of wood under high temperatures. It is a 100% Green product!

Dark color option

Light color option

Holey Wood wall and ceiling planks add character, warmth and a rustic feel to any residential or commercial wall decor. Our wall decor planks have the deepest in the market 3D structure of reclaimed wood paneling. Actually, our planks are better than reclaimed wood, because they have deeper wood structure and also the product is more “clean” cause its made from a new wood, which has been thermally modified (no insects and bacteria in our wood).

The Holey Wood 3D wall and ceiling planks are manufactured in two colors - dark and light to match any design ideas.

The thickness of the planks is 3/8", width is 3", 4" or 5", length is 24"

There are two ways to mount the planks to the wall:

- use standard wall panels glue
- nailing with finish nails.

Very easy, fast and clean installation!

Holey Wood planks are exactly matching to the 24" or 48" Armstrong grid structures.
