

LUCAS ROOFING GRANULES USES AND APPLICATION

Uses:

Roofing granules are used for the protection of the roof membrane and aesthetic purposes. Dense and non-porous, Lucas 3M ceramic coated roofing granules defend against harsh weather conditions and UV rays.

Application:

For hot type roofing the granules should be applied while the asphalt is hot for proper embedment.

For cold and adhesive type roofing the granules should be applied while the adhesive is still wet.

Sometimes the granules need to be pressed into the surface for proper adhesion,

Coverage:

Granule coverage will vary depending on the viscosity of the asphalt, adhesive and coating,
