

INNOVATIVE SOLUTIONS

STRAIT-FLEX®

deck-patch

The fastest way of finishing drywall to corrugated steel decking.

Strait-Flex delivers a new custom drywall patch to match the contours of corrugated steel decking saving time and money. No more ripping small paper tape around the shapes of decking! And because Deck-Patch is manufactured from the same patented material as our other patches, you can depend on its strength and bondability.

Features:

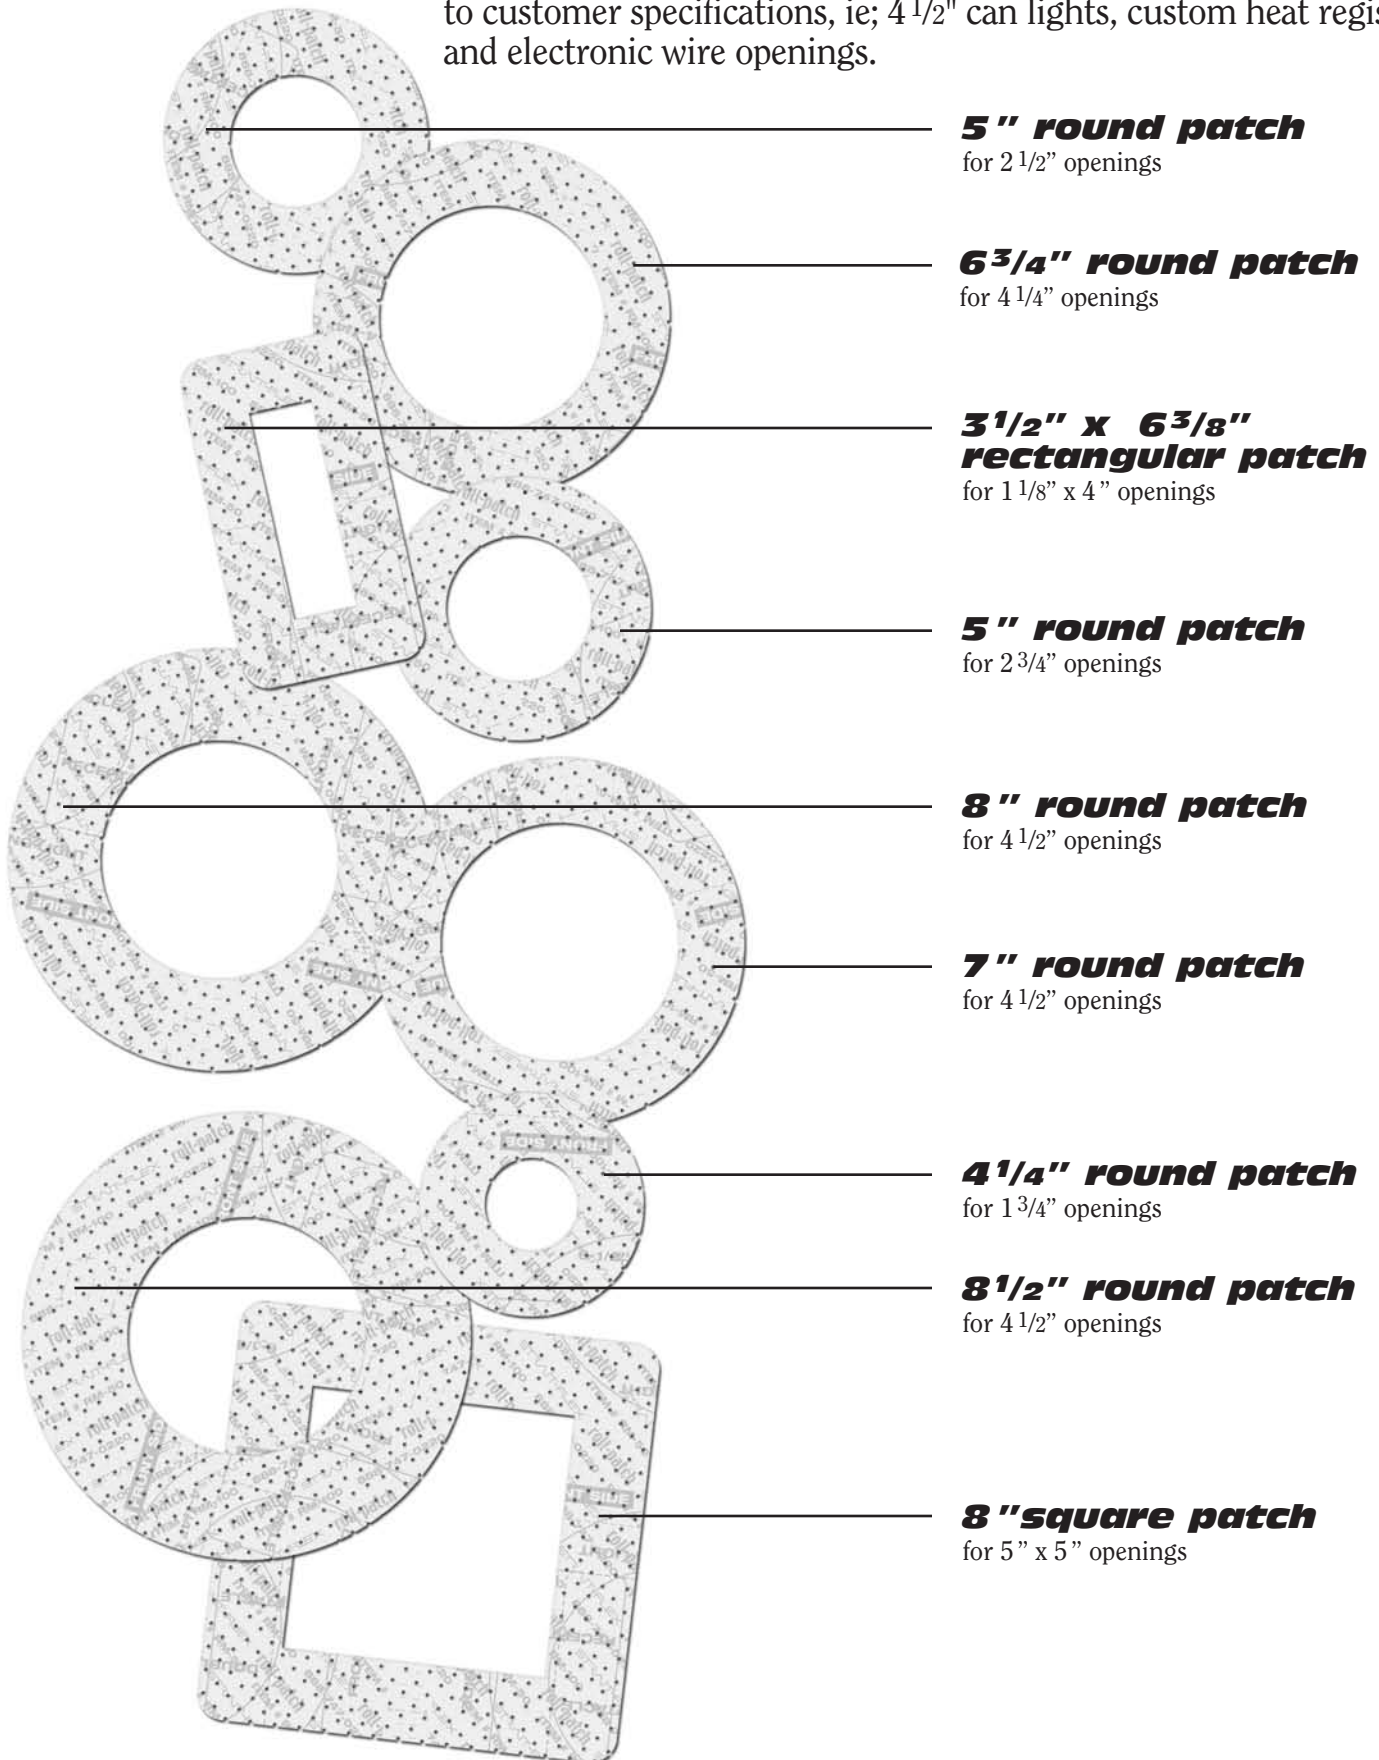

- Custom manufactured to match the contours of different decking. *Specify decking manufacturer and item number when ordering Deck-Patch.*
- Perforated in three foot sections and in the center for easy handling.
- Deck-Patch works great as a template for cutting drywall around the corrugated decking.
- Installs easily by applying compound to back of patch, press into place, and wipe down.
- Second coat of compound can be applied immediately – very light skim coat to finish.
- Cuts easily with knife or scissors.

Call us at (888) 747-0220 with your problem area. Or, simply ask us how to get the same work done faster. We'll have the answer. We'll even send you a free sample to try it out!
