

## CLEANING YOUR RAT ZAPPER

Your Rat Zapper *Ultra* will need a clean-up once in a while. How do you know when it's dirty?

### Here are a few signs:

The **green** and **red** lights both alternately flash and there is nothing inside or you hear a buzzing or zapping sound when you first turn on your Rat Zapper *Ultra*. These signs suggest that some moisture or material is bridging the metal plates which creates a false signal to the Rat Zapper *Ultra*'s techno-brain.

### Cleaning your Rat Zapper *Ultra* is easy:

1. Turn the power switch **OFF** and remove the batteries;
2. Get a shallow disposable tray into which your Rat Zapper *Ultra* can fit;
3. Fill the tray with approximately one-inch of warm water and a squirt of unscented dish detergent;
4. Immerse the **lower portion only** of your Rat Zapper *Ultra* in the pan for one hour;
5. Use a small, disposable, soft brush to **gently** clean around the metal plates;
6. **Gently flush** out the bottom of the Rat Zapper *Ultra* with fresh water (no water in the upper compartment, please!);
7. Allow the Rat Zapper *Ultra* to air dry **completely (no air compressors!)**;
8. Replace the batteries and you're back in biz!

## OKAY, CLASS IS ALMOST OVER!

Can we boast for a second? The Rat Zapper *Ultra* and the Rat Zapper *Rat Tale* are made with recycled plastics, recycled packaging and high-tech electronics to deliver you years of dependable service. You can use it 24/7 if need be. Rodents all gone? Store it until your friends, family and neighbors beg you for it.

## COME VISIT US!

We love visitors so please stop by our website at [www.victorpest.com](http://www.victorpest.com). You will find FAQ's, unsolicited reviews from happy customers and more information about our quality line of products.

Need help? We offer lifetime customer support! Visit the Live Chat section on our website or call us toll-free at 855-5-VICTOR.

Woodstream Corporation.  
Solid State Circuitry  
Made in China

# RODENTS 101

## CLASS IS IN SESSION

Our customers are very important to us and you're the #1 reason why we're becoming the household name in rodent control throughout the world.

We want you to be completely satisfied with the results of the revolutionary Rat Zapper Ultra.

## FIRST, DO A LITTLE DETECTIVE WORK!

Rats and Mice are nocturnal. That means while you sleep, they play and look for a meal. So, how do you locate their favorite hangouts? Look for **droppings** along baseboards and **look for points of entry**. Place your Rat Zapper *Ultra* **lengthwise against a wall** or other barrier in the area of suspected rodent activity, but **don't turn it on yet!!!** (First read *Baiting Strategies* and *Rats are Savvy* sections, below).

Look for Droppings  
along Baseboards

Look for Droppings in  
Attics & Subfloors

Look for a  
Point-of-Entry

## WHAT BATTERIES DO I USE?

Place 4 “D” alkaline batteries into your Rat Zapper *Ultra* which will provide approximately two years of stand-by power. The battery compartment is located between the power switch and the front of the Rat Zapper *Ultra* under the battery cover. Replace the batteries when necessary with Energizer or other comparable high quality alkaline batteries.

## WHEN DO I REPLACE THE BATTERIES?

If the **green check light** does **NOT** come on when you turn the power switch to the **ON** position, or you have a fast blinking **red light**, then you need to replace your batteries.

## BAITING STRATEGIES

Once you've placed your Rat Zapper *Ultra* in your high-traffic rodent zone, it's time to bait it. We've carefully researched dry pet food and found it an excellent lure. Other dry baits (nuts, dehydrated fruit, etc.) can also work well. The **method** of baiting, however, will be different for mice vs. rats.

**Goopy Bait Note:** Please **don't place moist or goopy bait** in your Rat Zapper *Ultra* unless you place it in a plastic container, like a medium plastic bottle cap, and then slide it to the back of your Rat Zapper *Ultra*. (Otherwise you may goop the electronics and/or falsely trip the system.)

## MICE ARE EASY

If you have a mouse in your house (super small droppings as compared to rat droppings, which are about the size of half a raisin) simply:

1. Making sure the **power is OFF**, place a few nuggets of the bait inside the unit and slide it to the **closed end** of the chamber;
2. Turn the unit **ON**. (The **green LED** light on top should blink once indicating the power is on and the batteries are good).

If mice are in fact present, you should have results tonight. If you're not certain you have mice or if you know you've got a rat problem, follow the *Rats Are Savvy* steps in the following section.

## RATS ARE SAVVY

Rats are wary critters and they'll initially avoid anything new in their environment. Good news is we're smarter than they are! It may take a few days or nights for the first rat to enter your new Rat Zapper *Ultra*, but be patient! If you believe a new form of bait might work better, go ahead and try something new to attract the rat into your Rat Zapper *Ultra*. Outwit them by taking the following extra five simple (but **hugely** important!) steps to lure them inside your Rat Zapper *Ultra*.

## To bait for rats:

1. Making sure the **power is OFF**, place a few nuggets of bait inside the unit, then slide it to the **closed end** of the chamber;
2. Then, place a few nuggets about **one-inch inside the open end** of the chamber;
3. Allow them **one free meal!** Once a rat goes in and chows down on all the bait, usually in one or two days, your Rat Zapper *Ultra* is officially “scented” and that rat and his brethren will be back for a shocking dining experience.
4. Replace **only** the bait in the **back of the chamber**;
5. Turn the unit **ON**. (The **green LED** light on top should blink once indicating the power is on and the batteries are good.)

## INSPECTION & REMOVAL OF DEAD RODENTS

The **red LED light** is your kill indicator and when it **flashes slowly**, it's time to empty your Rat Zapper *Ultra*. Turn the power switch to the **OFF** position and go ahead and look inside. It's okay, honest! There will be no disgusting blood or gore like other traps. The Rat Zapper *Ultra* is designed to provide you with the most humane and environmentally friendly means of pest “E-Rat-ication.” (Sorry, couldn't resist).

## THE COOL RAT TALE

Creeped out by those unpleasant or hard-to-reach places like attics, basements, and garages. So are we! That's why we designed the Rat Zapper *Rat Tale*. It is a 12-foot long, thin, flexible extension that enables ideal placement. All you do is plug the cord into your Rat Zapper *Ultra* so you don't have to go into those yucky places to check your trap!

Instead, on the end of the extension is a plastic mouse with bright red LED eyes that blink on and off when you've nabbed the bad guy. Place the mouse-shaped monitor in an accessible area for easy viewing.
