

General

The following drawings are general diagramatic examples only. Consult a certified heating professional for your specific application.

A single fan convector may be added to a series loop using monoflo tees.

General information on the use of Monoflo tees:

- . Scoop type is placed on the supply.
- . Venturi Type on the return.
- . If heating unit is below the main or more the 4 feet horizontally from the main use both scoop on the supply and a venturi on the return.

When mixing radiators of different head loss. i.e. fan convectors with radiators, balancing is often required to ensure proper flow through the fan convector.
