

# ECO® BY COSENTINO

Made from 75% recycled content, ECO® by Cosentino is an environmentally-friendly, non-porous countertop that is also resistant to scratching, staining and scorching. Made from recycled materials including porcelain, glass and mirror, these countertops are bound by an environmentally-friendly corn resin. ECO® by Cosentino distinguishes itself from other recycled surfacing materials because these reused materials have reached the end of their lifecycle, thus saving on the creation and consumption of natural resources. No other eco-friendly surface has its durability, design and affordability; plus, it's backed by a 10-year limited warranty.
