

Measure First!

- 1 Measure the “path of delivery” to ensure that your appliance will fit through doorways and hallways. Compare with appliance dimensions. For refrigerators, consider the unit’s depth, with and without doors. (Installers can remove doors from most refrigerators if necessary.)

Depth (B)

(Doors Off)

- 2 Measure the opening for the appliance at the narrowest point. Identify electric, fuel, water and venting sources as available. Measure width at the baseboard level.
