PRODUCT OVERVIEW

Exterior Parts

1 Control Panel & Door Handle
2 Front Cover
3 Lower Cover
4 Shipping Brace
5 Signal Light (some models)
6 Base
7 Leveling Feet

Signal Light (Front Display)
The top-control models have 3 indicator LEDs centered at the top of the front cover.

- Red: Error (See the Error Codes in Troubleshooting section.)
- White (steady): Normal operation
- White (blinking): Cycle has been paused. (After four minutes in pause mode, the machine turns off.)
- Green: Cycle finished normally.

The green light stays on for 90 seconds.

To keep the green light on until the door is opened, turn the power on, and then press and hold **High Temp** on the control panel for 3 seconds until OFF or On appears in the display. The dishwasher remembers this setting until manually changed.
### Interior Parts

1. Top Wash Impeller  
2. Upper Spray Arm  
3. Lower Spray Arm  
4. Filtration System  
5. Detergent and Rinse Aid Dispenser  
6. Drying Vent Cover  
7. Cutlery Rack (some models)  
8. Upper Rack  
9. Silverware Basket  
10. Lower Rack  
11. Steam nozzle (on steam models)

#### NOTE
- The silverware basket ships installed at the back of the bottom rack. For best performance, install it along the right side as shown.
- Remove all packing materials from the exterior and interior of the dishwasher before installing the appliance.

### Accessories

**Included Accessories**

- Installation brackets (2ea)  
- Wood screws (4ea)  
- Hose clamp (1ea)

- See step 8 and step 9 of Installation section.
Installation Parts and Tools

Parts not Provided

- Electrical cable
- Water supply tube
- Fittings for tube
- Coupler
- Teflon™ tape
- Air gap
- Wire nuts for 16-gauge wiring
- Hose clamp
- ¼” UL approved strain relief
- Electrical tape

Tools Needed

- Flat-blade screwdriver
- Phillips screwdriver
- Hole saw min. 2½” bit
- Electrical drill
- Gloves
- Safety glasses
- Adjustable wrench
- Tape measure
- Utility knife
- Level
- Tubing cutter
- Nipper
- Pliers
- Wire stripper
- ¼” Square drive wrench

Preparing Cabinet Opening

This dishwasher is designed to fit a standard dishwasher opening. An opening may be needed on both sides to route plumbing and electrical connections.

1. Select a location as close to the sink as possible for easy connections to water and drain lines.

2. To ensure proper drainage, install the dishwasher no more than 12 ft. (3.65 m) from the sink.

3. If installing the dishwasher in a corner, leave a minimum of 2” (50 mm) between the dishwasher and the adjacent wall.

4. To allow for proper clearance of plumbing and electrical, use the template included with the literature to determine the clearance on the side of the cabinet where the cabinet meets the back wall. Using a 2½” diameter hole saw, drill a hole in the target area as shown on the template.

---

**WARNING**

- Don’t use existing holes unless they are in the target area. Otherwise, the water supply and drain hose may be damaged by being crushed or kinked.

**CAUTION**

- Failure to properly locate the hole for the water and drain lines may prevent the dishwasher from installing flush with the cabinets and could result in kinked or damaged lines. Installation damage is not covered by the warranty, and leaks caused by improper installation may result in property damage.

For flush installations only, you may remove the cabinet brace inside the cabinet.
**Preparing Electrical Wiring**

1. Operate this appliance with the correct voltage as shown in this manual and on the rating plate. Connect it to a dedicated, properly grounded branch circuit which is protected by a time delay fuse. Connect the appliance using 3-wires, including a ground wire.

2. If an outlet and a three-prong power cord is used, it should be in an accessible location adjacent to and not behind the dishwasher and within 4 ft (1.2 m) of the dishwasher’s side.

3. The wiring or cord must be grounded properly. If in doubt, have it checked by a qualified electrician. Do not connect any other appliance to the same outlet.

4. Route the wiring or cord.

5. Make sure the electrical cable is oriented in the right side channel.

**WARNING**

- For personal safety, remove house fuse or open circuit breaker before installation.
- Do not use an extension cord or adapter plug with this dishwasher. Electrical and grounding connections must comply with the national electrical code/provincial and municipal code and/or other local codes.

**NOTE**

- If you find any damage to the dishwasher, contact your retailer or contractor.
- The included wire nut in 16AWG should be used.

---

**Preparing Water Supply Connection**

Make sure the house water supply is turned off before connecting the dishwasher water lines.

1. Connect the dishwasher to a hot water supply with a temperature range between 120 °F (49 °C) and 149 °F (65 °C). This temperature range provides the best washing results and shortest cycle time. To prevent damage to dishes, the temperature should not exceed 149 °F (65 °C).

2. When connecting the dishwasher water line, sealing tape or compound should be used on pipe threads to avoid leaks. Tape or compound should not be used on compression fittings.

3. The water supply tube must be located in the left side channel.

**NOTE**

- Use new hoses when connecting to the water supply. Do not reuse old hoses.
Preparing Dishwasher

Removing Rear Plastic Shipping Brace

NOTE
• Do not pull or lift the dishwasher using the handle; doing so can damage the door and hinges. Open the door and grab the body frame and the top front opening of the tub to move or lift the dishwasher.

Removing Lower Cover

1 Remove the two screws attaching the lower cover to the dishwasher.
2 Remove the lower cover from the base.
3 Remove the insulation pad from behind the access panel.

CAUTION
• If at any time the dishwasher is laid on its back, take care not to damage the drain hose.

NOTE
• Make sure that the lower cover replaces in the last step.

NOTE
• Do not push the door of the dishwasher with knees.
Attaching Mounting Hardware
For countertops made of wood or other material that will not be damaged by drilling, use the metal installation brackets.

1 Insert the installation brackets into the slots in the upper frame.

2 Bend the brackets to secure them to the dishwasher tub.

NOTE
• Installation brackets and screws can be found in the silverware basket.

For countertops made of granite, marble, or other materials that could be damaged by drilling, use the wood screws to attach the dishwasher to the cabinet. See installation instructions in Securing Dishwasher to Countertop.

Sliding Dishwasher into Cabinet
1 Slide the dishwasher carefully into the cabinet opening.

2 Make sure the drain hose inside the cabinet is not kinked or pinched.

3 Make sure the water supply line and electrical supply are routed through the channels under the dishwasher.

4 To avoid a kinked or pinched drain hose, be sure to pull on the drain hose while sliding the dishwasher into place. Do not allow any slack behind the dishwasher.

5 After leveling the dishwasher, do not leave the water supply line or power supply line under the base. This is a potential cause of water leaks. Place the water line and power supply line in the channel.
Leveling the Appliance

Check that dishwasher is level.
- Attach level on top front opening of tub from side to side.
- Attach level on front side of tub.

Make sure that the gap between the door and the tub is equal on both the left and right sides.

The water level should be checked after the initial fill on the Normal cycle. If the water level is not near the center of both tub lower indentations, the dishwasher may not be correctly leveled. The dishwasher may leak during operation if it is not correctly leveled.

Adjusting the Legs

Adjusting the Front Legs
- Use a flat-blade screwdriver or a pliers to turn the front legs and adjust the front of the tub.
- Turn the front legs clockwise to raise the front of the tub and counter-clockwise to lower it.
- The adjustments work identically for both front legs.

Adjusting the Rear Legs
- Use a Phillips screwdriver to adjust the back legs and the rear of the tub using the center screw at the base of the appliance in the front.
- Turn the center screw clockwise to raise the rear of the tub and counter-clockwise to lower it.

NOTE
- To avoid damaging the screw, do not use an electric screwdriver.
Securing Dishwasher to Countertop

For countertops made of wood or other material that will not be damaged by drilling, use Method 1.
For countertops made of granite, marble, or other materials that could be damaged by drilling, use Method 2.

NOTE
• Cover the filter hole with towels to prevent screws from falling down into the pump.
• Use a magnetic screwdriver.

Method 1
Using the provided screws, secure the dishwasher to the countertop through the holes in the bracket.

NOTE
• Installation brackets and screws can be found in the silverware basket. See Attaching Mounting Hardware section for more information on attaching installation brackets to dishwasher.

Method 2
1 Remove the plastic caps from the mounting bracket access holes.
2 Drive a wood screw through the mounting bracket and into the cabinet frame.
3 Reinstall the plastic caps.

Connecting Drain Hose

If the end of the drain hose does not fit the drain line, use a heat and detergent resistant adapter (not supplied). These may be obtained from a local plumbing supply store.
The two typical connections are shown. To prevent siphoning, one of the following connections should be used.

Drain Requirements
• Follow local codes and ordinances.
• Do not exceed 12 ft. (3.65 m) distance to drain.
• Do not connect drain lines from other devices to the dishwasher drain hose.
• If an extension drain hose is required, use 5/8" or 7/8" inside diameter, 2-3 ft. length hose and a coupler for connecting the two hose ends.

NOTE
• For drain hose installation, use the screw style clamp provided with this dishwasher in the silverware basket.
NOTE
• If the knockout plug has not been removed, the dishwasher will not be able to drain properly.

Connecting to Disposal with No Air Gap

1 Remove the knockout plug with a hammer and screwdriver.

2 Attach the drain hose to disposal with the hose clamp provided. Move into position and tighten the hose clamp.

Connecting Waste Tee with No Air Gap

1 Remove the knockout plug with a hammer and screwdriver.

2 Attach the drain hose to waste tee with the hose clamp provided. Move into position and tighten the hose clamp.

Connecting to Disposal or Waste Tee with Air Gap

1 Remove the knockout plug with a hammer and screwdriver.

2 Connect end of the drain hose to the air gap with hose clamp provided. This avoids water being siphoned from the tub.

3 Attach the rubber connector to disposal or waste tee with the hose clamp provided. Move into position and tighten the hose clamp.

Connecting without Air Gap

The height of the drain hose end must be at least 12" (305 mm) and within 40" (1016 mm) from the base of the appliance to avoid water being siphoned from the tub.
Connecting Water Supply

1. Before connecting, turn off the water supply.

2. Slide the flexible stainless-steel water line or copper tube into the elbow.

3. Tighten the compression nut and make sure that the line is not kinked or pinched.

NOTE
• During the final installation check of the dishwasher, an IE error code may appear on the display. Make sure the water line is not kinked and the water supply for the dishwasher has been turned on before calling for service.

Connecting Power

1. Before beginning, turn off electrical power to the unit at the circuit breaker.

2. Remove the junction box cover and then install the strain relief.

3. Twist the wire nuts tightly onto the wires; then wrap each connection with electrical tape.

4. Check again and make sure that all wires are connected correctly: black to black, white to white, green ground wire to green ground wire.

5. Replace the junction box cover.

NOTE
• The best location for the electrical conduit is on the right side of the back wall. Re-route the power cable before installation if the electrical conduit pipe is longer than 3" (76 mm) and is centered on the back wall.

WARNING
• Verify that the black wire is hot (120 V). If not, or if you are unsure of the power supply, have it checked by a licensed electrician.

CAUTION
• Do not leave stripped wire exposed. Trim stripped wire to fit completely inside wire nuts.
Final Check

1  Turn on electrical power.
2  Turn on house water supply.
3  Make sure the door opens and closes smoothly. If necessary, level the dishwasher again.
4  Run the dishwasher on a Turbo cycle to verify proper operation and check for leaks.

⚠️ CAUTION

- Only install the lower cover provided with the machine. Do not install cabinet baseboard as it may cause noise and leakage.

<table>

OPERATION

Using the Appliance

Before Using the Appliance

• Read the Important Safety Instructions.
• Connect to the hot water supply only. The water supply temperature should be a minimum of 120°F (49°C) for better washing performance and shorter cycle time.
• Follow the instructions for loading the dishwasher to ensure effective cleaning.
• Remove insoluble items such as bones, toothpicks, and pieces of paper while loading the dishwasher.

When loading the dishwasher

1. Only load items that are dishwasher-safe.
2. Remove solid, burned-on scraps from dishes prior to loading in the dishwasher.
3. Place items with deep dish bottoms at an angle to help water run off and speed the drying process.

NOTE
• Do not load utensils that are not heat-resistant or have decorative metal trim.

Quick Start

1. Load the Dishes
   Scrape the dishes free of excess food, bones, and any other hard, non-soluble residue. Pull each rack out and load the dishes as described in this manual.
2. Measure the Detergent
   Using the guidelines in this manual, fill the detergent cup with the recommended amount of detergent and close the lid. If a prewash is desired, the recess on top of the lid should also be filled with detergent.
3. Close the Door
4. Turn on the Dishwasher
   To turn on the display panel, press the Power button.
5. Check the Rinse Aid
   The Rinse Aid icon will flash if the level of rinse aid in the dishwasher is low. Add rinse aid if the level is low to maintain the effectiveness of the dry cycle.

6. Select the Cycle and Options
   Select the cycle and options that best fit the load by referring to the Cycle guide. The display will show the estimated time for the cycle and options selected.

7. Operate the Dishwasher
   Method 1
   • Press the Start button and then close the door in less than four seconds to operate the dishwasher. If the door is not closed within four seconds, the white LED with time flashes, an audible tone is heard, and the cycle does not start.
   Method 2
   • Close the door first and then press the Start button to operate the dishwasher.
   If the door is opened during the cycle, the dishwasher will stop. To resume the cycle, see methods 1 and 2 above.

   NOTE
   • If the door is opened during the cycle and is not closed within four seconds after selecting the Start button, or if the door is closed without pressing the Start button, the white LED with time flashes, an audible tone is heard, and the cycle does not start.

8. End of Cycle
   When the cycle is complete, a chime will sound and the display will show End until the door is opened or Power is pressed. To save energy, press and hold High Temp for three seconds to set the End display to automatically turn off a few minutes after the cycle ends.

   CAUTION
   • Do not open the door during operation or immediately after it has completed the wash cycle as the steam build up may cause scalding as the door is opened.

   NOTE
   • Empty the lower rack first and then the upper rack. This will avoid water dripping from the upper rack onto dishes in the lower rack.

Auto-Off
The dishwasher automatically turns off after four minutes of inactivity if paused or if no cycle is started.
Control Panel
For Non-Steam Models

1 Power
- Press the **Power** button to turn power on and off. If no cycle is selected within 4 minutes, the dishwasher powers off.
- After the cycle is complete, the power automatically turns off for purposes of safety and economy.
- If there is a power surge, power outage, or disruption of any kind, power is automatically turned off for safety.
- When power is connected again, it will turn on automatically and resume the cycle.

2 Rinse Aid ![Icon]
This icon illuminates when the rinse aid level is low. The LED automatically shuts off when the rinse aid is refilled or the level is set to 0.

3 Digital Display
The digital display on the control panel shows the ESTIMATED cycle time. When the dishwasher is powered up, the display is blank. When the cycle and options are selected, the display shows the total estimated time to complete those selections. During operation, the display shows the remaining estimated operating time.

**NOTE**
- The estimated time shown on the display does not include delay times for heating water, etc.
- If **Delay Start** is selected, the display shows the delay time in hours.
- Cycle time may vary depending on the soil level of your load.

4 Control Lock ![Icon]
The Control Lock feature helps prevent settings from being changed during a cycle. Selecting this feature locks all of the buttons, except for the **Power** button, on the control panel. This feature does not lock the door.
- Press and hold **Dual Zone** for three seconds to activate or deactivate Control Lock.
- To start a new cycle, deactivate Control Lock.

5 Cancel
The drain pump activates and the cycle cancels. Once the dishwasher finishes draining, the power turns off.
- Press and hold **Start** for three seconds to activate.

6 Start
To operate the machine, either press Start and close the door within four seconds or close the door and press **Start**.

Beep On/Off
To activate or deactivate the button sounds, press the **Half Load** button for three seconds. The error alert sound can not be turned off.

Connect (for Wi-Fi models) ![Icon]
When the appliance is connected to the internet through a home Wi-Fi network, this icon illuminates.
- Press and hold **Delay Start** for approximately three seconds to connect to the network.
For Steam Models

1 Power

- Press the Power button to turn power on and off. If no cycle is selected within 4 minutes, the dishwasher powers off.
- After the cycle is complete, the power automatically turns off for purposes of safety and economy.
- If there is a power surge, power outage, or disruption of any kind, power is automatically turned off for safety.
- When power is connected again, it will turn on automatically and resume the cycle.

2 Rinse Aid Icon

This icon illuminates when the rinse aid level is low. The LED automatically shuts off when the rinse aid is refilled or the level is set to 0.

3 Digital Display

The digital display on the control panel shows the ESTIMATED cycle time. When the dishwasher is powered up, the display is blank. When the cycle and options are selected, the display shows the total estimated time to complete those selections. During operation, the display shows the remaining estimated operating time.

NOTE

- The estimated time shown on the display does not include delay times for heating water, etc.
- If Delay Start is selected, the display shows the delay time in hours.
- Cycle time may vary depending on the soil level of your load.

4 Control Lock

The Control Lock feature helps prevent settings from being changed during a cycle. Selecting this feature locks all of the buttons, except for the Power button, on the control panel. This feature does not lock the door.

- Press and hold Dual Zone for three seconds to activate or deactivate Control Lock.
- To start a new cycle, deactivate Control Lock.

5 Cancel

The drain pump activates and the cycle cancels. Once the dishwasher finishes draining, the power turns off.

- Press and hold Start for three seconds to activate.

6 Start

To operate the machine, either press Start and close the door within four seconds or close the door and press Start.

Beep On/Off

To activate or deactivate the button sounds, press the Half Load button for three seconds. The error alert sound can not be turned off.

Connect

When the appliance is connected to the internet through a home Wi-Fi network, this icon illuminates.

- Press and hold Delay Start for approximately three seconds to connect to the network.
Cycles
Select your desired cycle.

Auto
This cycle senses the load size, soil amount and soil toughness and is optimized to achieve the best cleaning.
• For steam models, this cycle has the added power of steam.

Heavy
This cycle is for heavily soiled dishes and dishes with hardened on soil. The Heavy cycle defaults to the strongest spray intensity and uses it to wash heavily soiled dishes.
• For steam models, this cycle has the added power of steam.

Delicate
Use this cycle to clean delicate items such as fine china and stemware.
• For steam models, this cycle has the added power of steam.

Refresh (Steam Models)
This cycle refreshes up and warms dishes that have been unused for a long time.
• Do not use detergent when using this cycle.

Normal
This cycle is for moderately soiled, everyday loads. Select the Night Dry option if leaving dishes overnight. Press and hold Extra Dry for three seconds to activate Night Dry.

Turbo
This cycle will clean heavily soiled dishes in an hour using slightly more energy and water. Select the Extra Dry options for better drying.

Download Cycle
Use a dedicated cycle downloadable via Wi-Fi or NFC.

Machine Clean
This cycle is for cleaning the inside of the dishwasher. Use the cycle without dishes in the machine. It eliminates residual soils, odor, white spots, and other dirt. Add citric acid or another cleaning agent for more effective results.
• Press and hold Heavy for three seconds to activate.

NOTE
• The Machine Clean icon flashes every 30 cycles. To activate or deactivate the icon, press the Delicate button for three seconds.

Rinse
This cycle is a quick rinse for dishes that will not be washed immediately. The cycle rinses dishes that have excess soil to soften dried on residue. Rinsing the dishes helps prevent odors in the dishwasher. No detergent should be used.
• Press and hold Normal for three seconds to activate.

Express
This cycle will quickly clean lightly soiled dishes. (Time: 33 minutes) Select the Extra Dry option or another cycle for better drying.
• Press and hold Turbo for three seconds to activate.

NOTE
• Rinse, Turbo, and Express cycles do not have drying or have a shortened dry time. For better drying performance, open the door after these cycles or select a different cycle.
Options
Select the desired cycle button and then select the options for that cycle.

Dual Zone
This option automatically sets the spray intensity to soft for the upper spray arm and strong for the lower spray arm. Place heavily soiled dishes like plates and bowls in the lower rack and lightly soiled dishes like cups and small plates in the upper rack to get the best results.

Half Load
This option washes intensively by selecting the upper or lower racks. For small loads, use just the upper or lower rack to save energy and time. By pressing the Half Load button, the settings and the cancellation of the Half Load option are available.

Energy Saver
This option saves energy by reducing the wash and rinse temperatures. Wash time is increased to maintain wash performance. Do not use this cycle with heavily soiled dishes.

Pre-Steam (Steam Models)
This option adds steam at the start of the cycle to improve wash performance.

High Temp
Raises the main wash temperature to improve cleaning.

Extra Dry
Select the Extra Dry option for better drying performance. This option adds 20 minutes of extra drying time to the cycle and raises the heated rinse temperature.

Night Dry
Dishes are often left in the dishwasher overnight after the cycle ends. This can result in the steam inside the tub condensing on dishes, leaving them wet. The Night Dry option runs the ventilation fan periodically to help vent the steam from the tub.

• Press and hold Extra Dry for three seconds to activate.

Delay Start
The Delay Start feature delays the start of a selected cycle. Each time the Delay Start button is pressed, the delay time increases by an hour. The delay time can be set from 1 to 12 hours, in one-hour increments.
# Cycle/Option Guide

The cycle guide below shows the available options for each cycle.

△: Extra drying time only, no added high-temperature rinse.
Loading the Dishwasher

The extra tall tub allows loading of dishes, pans, or other utensils up to 14” high.

For effective washing performance, always follow the following instructions.

• Remove large particles of food debris from plates including bones etc. before loading.
• Items with burnt on food should be soaked prior to loading in the dishwasher.
• Deep pots or dishes should be placed upside down.
• Make sure that all items do not touch each other.

Non-Dishwasher Safe Items

The combination of high water temperature and dishwasher detergents may damage certain items. Do not wash the following items in the dishwasher.

• Copper or anodised aluminium
• Hand painted silver or gold leaf crockery
• Wood or bone handled utensils
• Iron or non rust proof utensils
• Plastic items which are not dishwasher safe
• Expensive ware such as silver and dishes with golden rings
• Fragile item such as crystal glasses

CAUTION

• Do not place pots or pans with plastic handles in the appliance as the handles may deteriorate due to the heat and detergent.
• Water proof or long lasting lipstick smudges on glasses may not be removed during the wash.

Loading the Lower Rack

Loading 10 Place Settings

Loading 12 Place Settings

Lower Rack Loading Tips:

• Plates should be positioned upright and facing the center of the rack and pots, pans and large dishes must be turned upside down.
• Load dinner plates, dishes, soup bowls etc. between the tines.
• Load cookie sheets, cake pans and other large items on the sides or back of the rack. Loading these items in the front of the dishwasher can prevent the water spray from reaching the detergent dispenser.
• Make sure that pot handles and other large items do not stop the rotation of the spray arms.
• The lower rack should not be used for small items such as cups, wine glasses, or small plates. These items should be loaded in the upper rack.
• Make sure that large items do not interfere with the rotation of the spray arms, and do not prevent the detergent dispenser from opening.
Folding Down the Lower Tines
Fold tines down to fit larger dishes; pull tines back up to fit smaller dishes.

Loading Dishes & Pots

Loading Pots & Bowls
Loading the Silverware Basket
The silverware basket has separators to avoid scratching and tarnishing of delicate silverware.

Loading 10 Place Settings

Silverware Loading Tips:
• For best cleaning results, use the top separators in the basket when loading silverware. The separators will prevent nesting of silverware.
• Load sharp items, such as knives, pointing down.
• When unloading the dishwasher, it is best to start with the silverware basket. Doing so will prevent water droplets from falling on your silverware from the upper rack.

WARNING
• Be careful when loading and unloading sharp items. Load sharp knives with the handles up to reduce the risk of personal injury.

Loading the Upper Rack

Loading 10 Place Settings

Loading 12 Place Settings

Upper Rack Loading Tips:

- Place cups and glasses in the rows between the rack tines. Placing them over the rack tines can lead to breakage and water spots.
- To avoid chipping, do not let stemware touch other items.
- Place items so that the open end faces down for cleaning and drying.
- Do not stack items on top of each other.
- Use the upper rack for small or delicate items such as small plates, cups, saucers, glasses, and dishwasher-safe plastic items.
- Cups, glasses, and bowls must be positioned upside down.
- Extra cups or cooking utensils can be laid on the fold down cup racks, which may also provide support for long-stemmed glasses.
- Make sure items do not interfere with the rotation of the spray arms above and below the upper rack.
- When loading larger items in the upper rack, such as wine glasses or taller cups, it may be necessary to remove the cutlery rack if one is present.

Loading the Cup Rack (On Some Models)

Some models have cup racks that provide support for long-stemmed glasses.

The cup racks can be folded up out of the way for tall glasses.
Removing and Replacing Cup Racks (On Some Models)

The left and right cup racks are interchangeable and can be removed.

1. Slide cup rack down into its closed position.

2. Locate assembly slot on cup rack and firmly pop rack off support bar on that side.
   - The rack on the left pops free at the back. The rack on the right pops free at the front.

3. Slide cup rack off support bar on opposite side.

4. Reverse instructions to replace cup rack.

Folding Down the Upper Tines

Fold tines down to fit larger dishes; pull tines back up to fit smaller dishes.

Case 2

Loading Dishes & Pots
Height Adjustable Upper Rack

The upper rack adjusts up and down. Raise the upper rack to allow items up to 14" tall in the lower rack. Lower the upper rack to allow dishes up to 12" tall in the upper rack. The dishwasher ships with the upper rack raised.

There are three available positions for adjusting the height of the upper rack to create more space.

Lowering the Rack:
Hold the rack at the center of each side to support its weight. Then, push the button on each side to release the rack and lower it to the lower position.

Raising the Rack:
Lift the rack at the center of each side until the rack locks into place in the upper position. It is not necessary to lift the lock levers to raise the rack.

WARNING
• Before adjusting, ensure the rack is empty of all dishes. Otherwise dishes may get damaged or you may get injured.

NOTE
• Before pushing the upper rack into the dishwasher, ensure the rack height is the same on both sides. If the height is not the same on both sides, the dishwasher door will not shut and the upper spray arm will not connect to the water inlet.
• Raise the upper rack without pushing the buttons on each side. Pushing the buttons when raising the rack will prevent the rack from locking into position.
• To set the rack to the middle position, it may be easier to lower the rack all the way down and then raise each side of the rack individually until it clicks into place.

• There is a 24 5/8 inches (56 mm) gain in height when the upper rack is moved to the lower position.
• After adjusting the rack levels, check that the spray arms are free to rotate.
• With the lower position of the upper rack, check if the bottom part of upper rack including spray arm is not disturbing items on the lower rack.
• When the upper rack is in the lower position, push in the upper rack first, and the lower rack later.
• Pull out the lower rack first, and the upper rack later.
• Raise the upper rack without pushing the buttons on each side. Pushing the buttons when raising the rack will prevent the rack from locking into position.
• To set the rack to the middle position, it may be easier to lower the rack all the way down and then raise each side of the rack individually until it clicks into place.
Loading the Cutlery Rack (On Some Models)
The cutlery rack is best suited for flatware and most cooking or serving utensils. It can also fit small prep bowls and lids. The separators on the cutlery racks help keep flatware separated to avoid damage and improve cleaning.

NOTE
• For best cleaning performance, place flatware in the silverware baskets. Heavily soiled utensils or items with baked on foods should be placed in the middle rack or spoon basket for best performance.

Height Adjustable Tray (On Some Models)
The tray on the left side can be adjusted to a high or low position to accommodate utensils or cutlery of different sizes. Remove dishes before adjusting the tray. Adjust the tray by sliding the lever.

Loading 10 Place Settings

Removing the Cutlery Rack
The entire cutlery rack can be removed if more space is needed on the upper rack for larger items.
Always remove the cutlery from the rack before removing the rack.
Pull the rack out to the end of the rails. Then, lift the front of the rack so that the rollers clear the stop on the end of the rail. The rack can now be slid forward and removed from the rails.

WARNING
• Be careful when loading and unloading items with sharp edges. Load sharp knives with the blade down to reduce the risk of injury.
Adding Cleaning Agents

Adding Detergent to the Dispenser

- Remove the label on the dispenser prior to running the dishwasher for the first time.
- The amount of detergent needed depends on the cycle, load size, and soil level of dishes.
- Put detergent into the detergent compartment before starting any cycle, except the Rinse cycle.

1. Push the button on the dispenser lid to open the cover.

2. Add dishwashing detergent to the main wash compartment until the level is between the lines marked 15 and 25.
   - Fill to over the 25 line for hard water or heavily soiled loads.
   - Fill to the 15 line for soft water or lightly soiled loads.

3. Push the detergent lid to slide the lid closed until it clicks.

4. If a prewash is desired, fill the recessed prewash compartment area on the lid with detergent.

⚠️ WARNING
- Dishwasher detergent and rinse aid contain chemical components, like all other household detergent. So, they must be kept out of the reach of children.

⚠️ CAUTION
- Use only detergent intended for dishwashers. Incorrect detergent may cause the dishwasher to fill with suds during operation. Excess suds may reduce wash performance and may cause the dishwasher to leak.
- Do not use liquid rinse aid if using detergent tablets which include rinse aid.

NOTE
- After completion of the wash program, check whether the detergent was completely washed out.
- Some dishwasher detergent tablets may become stuck in the dispenser due to their excessive size. Tablets can be placed onto the base of the wash tub next to the filter before starting the cycle.
- Too much detergent can leave a film on dishes and in the dishwasher, resulting in poor wash performance.
- If dishwasher detergent tablets are used without liquid rinse aid, the dishes and dishwasher interior will have excessive moisture. Select the Extra Dry option for better drying performance.
- Using liquid rinse aid improves drying performance by allowing water to drain off of dishes after final rinse.
- Do not use detergent tablets for shorter wash cycles. The tablet may not dissolve completely, causing detergent residue on dishes and inefficient cleaning.
- Using a wash booster helps remove spots, residue, and the white film caused by hard water. It does not help remove excess detergent residue.
