**OPERATOR'S MANUAL**

**SELF-PROPELLED ROTARY LAWN MOWER**

- Assembly
- Operation
- Maintenance
- Service and Adjustments
- Storage
- Troubleshooting

**WARNING:** This lawn mower is equipped with an internal combustion engine and should not be used on or near any unimproved forest-covered, brush-covered or grass-covered land unless the engine’s exhaust system is equipped with a spark arrester meeting applicable local or state laws (if any). If a spark arrester is used, it should be maintained in effective working order by the operator. In the state of California the above is required by law (Section 4442 of the California Public Resources Code). Other states may have similar laws. Federal laws apply on federal lands. A spark arrester for the muffler is available through your nearest authorized service center.
SAFETY RULES

**SAFETY RULES**

1. **Out of fuel.**
2. **Stale fuel.**
3. **Water in fuel.**
4. **Spark plug wire is disconnected.**
5. **Bad spark plug.**
6. **Disconnected battery connector (if equipped).**
7. **Blown fuse (if equipped).**
8. **Raise cutting height.**
9. **Clean/replace air filter.**
10. **Clean underside of mower housing.**
11. **Clean underside of mower housing.**

111. **Raise cutting height.**
112. **Clean/replace air filter.**
113. **Raise cutting height.
Acidic gas can damage the fuel system of an engine while in storage.
- Drain the fuel tank.
- Start the engine and let it run until the fuel lines and carburetor are empty.
- Never use engine or carburetor cleaner products in the fuel tank or permanent damage may occur.
- Use fresh fuel next season.

**NOTE:** Fuel stabilizer is an acceptable alternative in minimizing the formation of fuel gum deposits during storage. Add stabilizer to gasoline in fuel tank or storage container. Always follow the mix ratio found on stabilizer container. Run engine at least 10 minutes after adding stabilizer to allow the stabilizer to reach the carburetor. Do not drain the gas tank and carburetor if using fuel stabilizer.

**ENGINE OIL**
- Drain oil (with engine warm) and replace with clean oil. (See “ENGINE” in the Maintenance section of this manual).

**CYLINDER**
- Remove spark plug.
- Pour one ounce (29 ml) of oil through spark plug hole into cylinder.
- Pull starter handle slowly to distribute oil.
- Replace with new spark plug.

**BATTERY (IF EQUIPPED)**
- Disconnect the battery from the engine connector and charge battery 48 hours.

**OTHER**
- Do not store gasoline from one season to another.
- Replace your gasoline can if your can starts to rust. Rust and/or dirt in your gasoline will cause problems.
- If possible, store your unit indoors and cover it to protect it from dust and dirt.
- Cover your unit with a suitable protective cover that does not retain moisture. Do not use plastic. Plastic cannot breathe, which allows condensation to form and will cause your unit to rust.

**IMPORTANT:** Never cover mower while engine and exhaust areas are still warm.

**CAUTION:** Never store the lawn mower with gasoline in the tank inside a building where fumes may reach an open flame or spark. Allow the engine to cool before storing in any enclosure.

**DO NOT:**
- Do not trim near drop-offs, ditches or embankments. The operator could lose footing or balance.
- Do not trim excessively steep slopes.
- Do not mow on wet grass. Reduced footing could cause slipping.

**III. CHILDREN**
- Tragic accidents can occur if the operator is not alert to the presence of children. Children are often attracted to the machine and the mowing activity. Never assume that children will remain where you last saw them.
- Keep children out of the mowing area and under the watchful care of another responsible adult.
- Be alert and turn machine off if children enter the area.
- Before and while walking backwards, look behind and down for small children.
- Never allow children to operate the mower.
- Use extra care when approaching blind corners, shrubs, trees, or other objects that may obscure vision.

**IV. SAFE HANDLING OF GASOLINE**
- Use extreme care in handling gasoline. Gasoline is extremely flammable and the vapors are explosive.
- Extinguish all cigarettes, cigars, pipes and other sources of ignition.
- Use only an approved container.
- Never remove gas cap or add fuel while the engine is running. Allow engine to cool before refueling.
- Never refuel the machine indoors.
- Never store the machine or fuel container where there is an open flame, spark or pilot light such as a water heater or on other appliances.
- Never fill containers inside a vehicle, on a truck or trailer bed with a plastic liner. Always place containers on the ground away from your vehicle before filling.
- Never gas-powered equipment from the fuel tank, or container opening at all times until fueling is complete. Do not use a nozzle lock-open device.
- If fuel is spilled on clothing, change clothing immediately.
- Never overfill fuel tank. Replace gas cap and tighten securely.

**V. GENERAL SERVICE**
- Never run machine inside a closed area.
- Never make adjustments or repairs with the engine (motor) running. Disconnect the spark plug wire, and keep the wire away from the plug to prevent accidental starting.
- Keep nuts and bolts, especially blade attachment bolts, tight and keep equipment in good condition.
- Never tamper with safety devices. Check their proper operation regularly.
- Keep machine free of grass, leaves, or other debris build-up. Clean oil or fuel spillage. Allow machine to cool before storing.
- Stop and inspect the equipment if you strike an object. Repair, if necessary, before restarting.
- Never attempt to make wheel height adjustments while the engine is running.
- Grass catcher components are subject to wear, damage, and deterioration, which could cause moving parts or allow objects to be thrown. Frequently check components and replace with manufacturer’s recommended parts, when necessary.
- Mower blades are sharp and can cut. Wrap the blade(s) or wear gloves, and use extra caution when servicing them.
- Do not change the engine governor setting or overspeed the engine.
- Maintain or replace safety and instruction labels, as necessary.

**CONGRATULATIONS** on your purchase of a new Lawn Mower. It has been designed, engineered and manufactured to give you the best possible dependability and performance. Should you experience any problems you cannot easily remedy, please contact your nearest authorized service center. They have competent, well trained technicians and the proper tools to service or repair this unit.
- Read the SAFETY RULES and this Operator’s Manual in its entirety before you attempt to assemble or operate your new lawn mower to ensure proper operation and to prevent injury to yourself and others. Save this manual for future reference.
- Your new lawn mower has been assembled at the factory with the exception of those parts left unassembled for shipping purposes. To ensure safe and proper operation of your lawn mower, all parts and hardware you assemble must be tightened securely. Use the correct tools as necessary to ensure proper tightness.
- All parts such as nuts, washers, bolts, etc., necessary to complete the assembly have been placed in the parts bag.
TO REMOVE LAWN MOWER FROM CARTON
• Remove all loose parts from carton.
• Remove lawn mower housing with care. Avoid touching blade under housing. Always wear gloves or other protection when working under or lifting mower.

THINGS TO KNOW BEFORE YOU ASSEMBLE OR OPERATE YOUR LAWN MOWER

Do I have a side or rear discharge lawn mower?
Look for the grass discharge opening on your mower. If the opening is on the right side of the mower housing, it is a side discharge mower. If the opening is at the back of the mower housing, it is a rear discharge mower. Only rear discharge lawn mowers have a grass catcher included with the mower. Approved grass catchers for side discharge mowers may be purchased from your nearest authorized dealer.

Do I have a mulching lawn mower?
Look for the grass discharge opening on your mower. Raise the discharge guard (rear door on rear discharge mowers). If the opening is not visible, your lawn mower is mulcher ready. To convert to a discharging mower, see the Operation section of this manual.

What kind of engine is on my lawn mower?
When learning how to operate your new lawn mower, you will need to know what kind of engine powers the mower. A decal on the engine will indicate the manufacturer and type or brand name of the engine.

LAW MOWER
When lawn mower is to be stored for a period of time, clean it thoroughly, remove all dirt, grease, leaves, etc. Store in a clean, dry area.
• Clean entire lawn mower (See “CLEANING” in the Maintenance section of this manual).
• Lubricate as shown in the Maintenance section of this manual.
• Be sure that all nuts, bolts, screws, and pins are securely fastened. Inspect moving parts for damage, breakage and wear. Replace if necessary.
• Touch up all rusted or chipped paint surfaces; sand lightly before painting.

HANDLE
Your handle may be folded for storage as shown.
• Squeeze the bottom ends of lower handle towards each other until handle clears the handle brackets and swing handles forward over mower.
• Loosen upper handle mounting hardware enough to allow upper handle to be folded back.

IMPORTANT: When folding handles for storage or transportation, be sure to fold handles as shown or you may damage the control cables.

STORAGE
Immediately prepare your lawn mower for storage at the end of the season or if the unit will not be used for 30 days or more. CAUTION: Never store the lawn mower with gasoline in the tank inside a building where fumes may reach an open flame or spark. Allow the engine to cool before storing in any enclosure.
22PLUS REAR WHEEL DRIVE MODELS:
1. Remove screws securing rear baffles.
2. Turn lawn mower on its side with air filter and carburetor down.
3. Remove rear baffles from mower.
4. Remove blade bolt, lockwasher, hardened washer and blade.
5. Remove debris shield.
6. Remove gearcase belt keeper.
7. Remove drive belt.

ENGINE
CARBURETOR
The carburetor has been preset at the factory and adjustment should not be necessary. However, minor adjustment may be required to compensate for differences in fuel, temperature, altitude or load.
- The air filter must be assembled to the carburetor when running engine.
- Best carburetor adjustment is obtained when fuel tank is 1/4 full.
- In order for the engine to run, the operator presence control bar must be held in the operating position. Therefore, and assistant will be required to hold the control bar in the operating position when making final adjustment to the carburetor.

TO REPLACE DRIVE BELT
1. Place new drive belt on gearcase pulley.

NOTE: Always use factory approved belt to assure proper fit and long life.
2. Reinstall gearcase belt keeper. Be sure the new drive belt is inside the tabs of the gearcase belt keeper.
3. Position the blade adapter on the engine crankshaft. Be sure key in adapter and crankshaft keyway are aligned and that the drive belt is inside the tabs of the belt retainer.
4. Place rear baffles in mower housing.
5. Reinstall debris shield.
6. Reinstall blade.
7. Return mower to upright position.
8. Reinstall rear baffles screws.

ENGINE SPEED
The engine speed has been factory set. Do not attempt to increase engine speed as it may result in personal injury. If you believe the engine is running too fast or too slow, take your lawn mower to an authorized engine service center for repair and adjustment.

THROTTLE CONTROL
If it becomes necessary to adjust or replace the throttle control, see the ADJUSTMENT section of your engine manual.

HOW TO SET UP YOUR MOWER
UNFOLD HANDLE
IMPORTANT: Unfold handle carefully so as not to pinch or damage control cables.
2 POSITION / "ADJUSTABLE" HANDLES
- Raise handles until lower handle section locks into place in operating position.
- LEVER FORWARD TO RAISE MOWER
3 POSITION "QUICK" HANDLES
- Raise lower handle section to operating position and squeeze the bottom ends of lower handle towards each other until the pin in handle can be inserted into one of the three height adjustment holes.

STORAGE
1. Disconnect spark plug wire from spark plug and place wire where it cannot come in contact with plug.

ASSEMBLY
1. Insert handle bolt through handle and bracket and secure with knob.
2. Repeat for opposite side of handle.
3. Raise lower handle section to operating position and squeeze the bottom ends of lower handle towards each other until the pin in handle can be inserted into one of the three height adjustment holes.
INSTALL REAR WHEELS  
("HIGH WHEEL" MOWERS ONLY)  
Some high wheel models require washers which will be provided in a parts bag. If provided, install washers on the axle first as shown.  
- Install one (1) rear wheel on the axle of rear wheel adjuster.  
- Install 3/8-16 locknut and tighten securely.  
- Repeat procedure for other rear wheel.

"FABRIC TOP" GRASS CATCHERS  
TO ASSEMBLE AND ATTACH GRASS CATCHER  
- Put grass catcher frame into grass bag with rigid part of bag on the bottom.  
- Slip vinyl bindings over frame.  
  NOTE: If vinyl bindings are too stiff, hold them in warm water for a few minutes.  
  If bag gets wet, let it dry before using.  
- Lift the rear door on the mower housing.  
- For HINGE BRACKET mounted catcher, place the grass catcher frame onto the formed tabs on the rear door hinge bracket.  
- For HANDLE BRACKET mounted catcher, place frame side hooks into slots in handle brackets.

ASSEMBLE GRASS CATCHER  
(REAR DISCHARGE MOWERS ONLY)  
IMPORTANT: If your model lawn mower is mulcher ready, the mulcher plate or plug must be removed before using mower as a bagger. To convert mower to bagging or discharging, see the Operation section in this manual.  
Look at the different grass catcher illustrations that follow. Determine which type of grass catcher you have and follow the appropriate instructions.

6. Remove screw securing debris shield.  
   Note that the debris shield has a tab which fits into a gap in the housing.

SERVICE AND ADJUSTMENTS

21" (53cm) HI-VAC MODELS:

2. Route the other end of the new drive belt through hole in housing.  
3. Reattach debris shield to housing with screw previously removed. Be sure tab of debris shield is in gap of housing.  
4. Position blade on the blade adapter aligning the two (2) holes in the blade with the raised lugs on the adapter.  
5. Be sure the trailing edge of blade (opposite sharp edge) is up toward the engine as shown.  
6. Install the blade bolt with the lock washer and hardened washer into blade adapter and crankshaft.  
7. Use block of wood between blade and lawn mower housing to prevent blade from turning when removing blade bolt.  
   NOTE: Protect your hands with gloves and/or wrap blade with heavy cloth.  
8. Remove blade bolt.  
9. Remove blade, attaching hardware (bolt, lock washer, hardened washer), blade adapter and debris shield as one assembly.  
10. Remove drive belt from blade adapter and debris shield; discard old belt.  

TO REPLACE DRIVE BELT  
1. Place new drive belt in the belt retainer of the debris shield. Be sure to route belt between belt keepers and through slot as shown.  

18" (45cm) HI-VAC MODELS:

1. Place new drive belt in the belt retainer of the debris shield. Be sure to route belt between belt keepers and through slot as shown.  

21" (53cm) HI-VAC MODELS:

2. Route the other end of the new drive belt through hole in housing.  
3. Reattach debris shield to housing with screw previously removed. Be sure tab of debris shield is in gap of housing.  
4. Position blade on the blade adapter aligning the two (2) holes in the blade with the raised lugs on the adapter.  
5. Be sure the trailing edge of blade (opposite sharp edge) is up toward the engine as shown.  
6. Install the blade bolt with the lock washer and hardened washer into blade adapter and crankshaft.  
7. Use block of wood between blade and lawn mower housing to prevent blade from turning when removing blade bolt.  
   NOTE: Protect your hands with gloves and/or wrap blade with heavy cloth.  
8. Remove blade bolt.  
9. Remove blade, attaching hardware (bolt, lock washer, hardened washer), blade adapter and debris shield as one assembly.  
10. Remove drive belt from blade adapter and debris shield; discard old belt.  

TO REPLACE DRIVE BELT  
1. Place new drive belt in the belt retainer of the debris shield. Be sure to route belt between belt keepers and through slot as shown.  

18" (45cm) HI-VAC MODELS:

1. Place new drive belt in the belt retainer of the debris shield. Be sure to route belt between belt keepers and through slot as shown.  

21" (53cm) HI-VAC MODELS:

2. Route the other end of the new drive belt through hole in housing.  
3. Reattach debris shield to housing with screw previously removed. Be sure tab of debris shield is in gap of housing.  
4. Position blade on the blade adapter aligning the two (2) holes in the blade with the raised lugs on the adapter.  
5. Be sure the trailing edge of blade (opposite sharp edge) is up toward the engine as shown.  
6. Install the blade bolt with the lock washer and hardened washer into blade adapter and crankshaft.  
7. Use block of wood between blade and lawn mower housing to prevent blade from turning when removing blade bolt.  
   NOTE: Protect your hands with gloves and/or wrap blade with heavy cloth.  
8. Remove blade bolt.  
9. Remove blade, attaching hardware (bolt, lock washer, hardened washer), blade adapter and debris shield as one assembly.  
10. Remove drive belt from blade adapter and debris shield; discard old belt.  

18" (45cm) HI-VAC MODELS:

1. Place new drive belt in the belt retainer of the debris shield. Be sure to route belt between belt keepers and through slot as shown.  

21" (53cm) HI-VAC MODELS:

2. Route the other end of the new drive belt through hole in housing.  
3. Reattach debris shield to housing with screw previously removed. Be sure tab of debris shield is in gap of housing.  
4. Position blade on the blade adapter aligning the two (2) holes in the blade with the raised lugs on the adapter.  
5. Be sure the trailing edge of blade (opposite sharp edge) is up toward the engine as shown.  
6. Install the blade bolt with the lock washer and hardened washer into blade adapter and crankshaft.  
7. Use block of wood between blade and lawn mower housing to prevent blade from turning when removing blade bolt.  
   NOTE: Protect your hands with gloves and/or wrap blade with heavy cloth.  
8. Remove blade bolt.  
9. Remove blade, attaching hardware (bolt, lock washer, hardened washer), blade adapter and debris shield as one assembly.  
10. Remove drive belt from blade adapter and debris shield; discard old belt.  

18" (45cm) HI-VAC MODELS:

1. Place new drive belt in the belt retainer of the debris shield. Be sure to route belt between belt keepers and through slot as shown.  

21" (53cm) HI-VAC MODELS:

2. Route the other end of the new drive belt through hole in housing.  
3. Reattach debris shield to housing with screw previously removed. Be sure tab of debris shield is in gap of housing.  
4. Position blade on the blade adapter aligning the two (2) holes in the blade with the raised lugs on the adapter.  
5. Be sure the trailing edge of blade (opposite sharp edge) is up toward the engine as shown.  
6. Install the blade bolt with the lock washer and hardened washer into blade adapter and crankshaft.  
7. Use block of wood between blade and lawn mower housing to prevent blade from turning when removing blade bolt.  
   NOTE: Protect your hands with gloves and/or wrap blade with heavy cloth.  
8. Remove blade bolt.  
9. Remove blade, attaching hardware (bolt, lock washer, hardened washer), blade adapter and debris shield as one assembly.  
10. Remove drive belt from blade adapter and debris shield; discard old belt.  

18" (45cm) HI-VAC MODELS:

1. Place new drive belt in the belt retainer of the debris shield. Be sure to route belt between belt keepers and through slot as shown.  

21" (53cm) HI-VAC MODELS:

2. Route the other end of the new drive belt through hole in housing.  
3. Reattach debris shield to housing with screw previously removed. Be sure tab of debris shield is in gap of housing.  
4. Position blade on the blade adapter aligning the two (2) holes in the blade with the raised lugs on the adapter.  
5. Be sure the trailing edge of blade (opposite sharp edge) is up toward the engine as shown.  
6. Install the blade bolt with the lock washer and hardened washer into blade adapter and crankshaft.  
7. Use block of wood between blade and lawn mower housing to prevent blade from turning when removing blade bolt.  
   NOTE: Protect your hands with gloves and/or wrap blade with heavy cloth.  
8. Remove blade bolt.  
9. Remove blade, attaching hardware (bolt, lock washer, hardened washer), blade adapter and debris shield as one assembly.  
10. Remove drive belt from blade adapter and debris shield; discard old belt.  

18" (45cm) HI-VAC MODELS:

1. Place new drive belt in the belt retainer of the debris shield. Be sure to route belt between belt keepers and through slot as shown.  

21" (53cm) HI-VAC MODELS:

2. Route the other end of the new drive belt through hole in housing.  
3. Reattach debris shield to housing with screw previously removed. Be sure tab of debris shield is in gap of housing.  
4. Position blade on the blade adapter aligning the two (2) holes in the blade with the raised lugs on the adapter.  
5. Be sure the trailing edge of blade (opposite sharp edge) is up toward the engine as shown.  
6. Install the blade bolt with the lock washer and hardened washer into blade adapter and crankshaft.  
7. Use block of wood between blade and lawn mower housing to prevent blade from turning when removing blade bolt.  
   NOTE: Protect your hands with gloves and/or wrap blade with heavy cloth.  
8. Remove blade bolt.  
9. Remove blade, attaching hardware (bolt, lock washer, hardened washer), blade adapter and debris shield as one assembly.  
10. Remove drive belt from blade adapter and debris shield; discard old belt.  

18" (45cm) HI-VAC MODELS:

1. Place new drive belt in the belt retainer of the debris shield. Be sure to route belt between belt keepers and through slot as shown.  

21" (53cm) HI-VAC MODELS:

2. Route the other end of the new drive belt through hole in housing.  
3. Reattach debris shield to housing with screw previously removed. Be sure tab of debris shield is in gap of housing.  
4. Position blade on the blade adapter aligning the two (2) holes in the blade with the raised lugs on the adapter.  
5. Be sure the trailing edge of blade (opposite sharp edge) is up toward the engine as shown.  
6. Install the blade bolt with the lock washer and hardened washer into blade adapter and crankshaft.  
7. Use block of wood between blade and lawn mower housing to prevent blade from turning when removing blade bolt.  
   NOTE: Protect your hands with gloves and/or wrap blade with heavy cloth.  
8. Remove blade bolt.  
9. Remove blade, attaching hardware (bolt, lock washer, hardened washer), blade adapter and debris shield as one assembly.  
10. Remove drive belt from blade adapter and debris shield; discard old belt.  

18" (45cm) HI-VAC MODELS:

1. Place new drive belt in the belt retainer of the debris shield. Be sure to route belt between belt keepers and through slot as shown.
MODELS WITH GEARCASE-MOUNTED BELT KEEPER:
- Remove drive cover.
- Remove spring and belt keeper.
- Remove belt from gearcase pulley.

- Route the other end of the new drive belt through hole in housing.
- Return mower to upright position.
- Install new belt on gearcase pulley.
- Reinstall belt keeper and spring.
- Reinstall drive cover.

**NOTE:** Always use factory approved belt to assure proper fit and long life.
- Turn lawn mower on its side with air filter and carburetor down.
- Reinstall blade and blade adapter.

**HI-VAC MODELS:**
1. Disconnect spark plug wire from spark plug and place wire where it cannot come in contact with plug.
2. Remove screws retaining drive cover and remove drive cover from lawn mower housing.
3. Remove drive cable from anchor, then detach it and return spring from idler arm assembly.

**18” (45cm) HI-VAC MODELS:**
- Position the blade adapter on the engine crankshaft. Be sure key in adapter and crankshaft keyway are aligned; and that the drive belt is inside the tabs of the belt retainer.
- Turn lawn mower on its side. See engine manual for proper direction of turning over the engine.
- Remove blade and blade adapter.
- Remove belt from blade adapter.
- Position the blade adapter on the engine crankshaft. Be sure key in adapter and crankshaft keyway are aligned; and that the drive belt is inside the tabs of the belt retainer.

**21” (53cm) HI-VAC MODELS:**
4. Pivot idler arm assembly to slacken drive belt, then remove drive belt from drive pulley, belt keepers and idler arm.
5. Turn lawn mower on its side. Make sure air filter and carburetor are up.

**SERVICE AND ADJUSTMENTS**

**ASSEMBLY**

**SPARK PLUG BOOT**
On some models a spark plug boot is packed loose in the parts bag. If your model has the boot, install on spark plug wire and reconnect spark plug wire to spark plug.

**ALL GRASS CATCHERS**

**CAUTION:** Under normal usage, the catcher material is subject to deterioration and wear and should, therefore, be checked frequently for replacement. Any replacement catcher should be checked to ensure compliance with original manufacturer’s specifications.

**CAUTION:** Do not run lawn mower without the discharge guard (rear door), approved grass catcher, clipping deflector or mulcher plate in place. Never attempt to operate mower with the discharge guard (rear door) removed or propped open.
TO PREPARE BATTERY  
(ELECTRIC START MODELS ONLY)

NOTE: Your battery must be charged before you can start your lawn mower.
- Open battery box (if equipped).
- Disconnect engine connector (male) (if equipped) from battery connector (female).
- Connect battery charger connector (male) to harness connector (female).
- Plug battery charger into 110 volt A.C. outlet.
- Leave battery charger connected for 24 hours before starting your engine for the first time.
- Reconnect engine connector (male) (if equipped) to battery connector (female).
- After charging, connect engine connector (male) (if equipped) to battery connector (female).
- Connect your battery charger to charge battery after each use.

IMPORTANT: The engine will not recharge your battery. At the end of the mowing season the battery should be charged for 48 hours to protect the battery during winter storage.

CAUTION: Always disconnect the engine connector from the battery connector to prevent accidental starting when transporting or storing your lawn mower after the season.

MODELS WITH GEARCASE-MOUNTED BELT KEEPER:
- Remove drive cover and belt keeper.
- Remove belt from gearcase pulley.
- Turn lawn mower on its side. See engine manual for proper direction of turning over the engine.
- Remove blade and blade adapter.
- Remove belt from pulley of blade adapter.
- Install new belt by reversing above steps.

NOTE: Always use factory approved belt to assure fit and long life.

REAR WHEEL DRIVE MODELS:
MODELS WITH IDLER ASSEMBLY:
- Disconnect spark plug wire from spark plug and place wire where it cannot come in contact with plug.
- Remove screws retaining drive cover (not shown); and remove drive cover from lawn mower housing.

IMPORTANT: Blade bolt is grade 8 heat treated.
SERVICE AND ADJUSTMENTS

3 POSITION “QUICK” HANDLES
The handle on your lawn mower has three (3) height positions - adjust to height that suits you.
- Squeeze the bottom ends of lower handle towards each other until the pin in handle can be inserted into one of the three height adjustment holes.

“QUICK RELEASE” HANDLES
The upper handle may be adjusted to three (3) different height positions.
1. Loosen both handle levers enough to allow the upper handle to pivot to the desired adjustment position.
2. Tighten both handle levers securely.

TO REMOVE / REPLACE DRIVE BELT
FRONT WHEEL DRIVE MODELS:
- “STANDARD” OR “DUAL BAIL” MODELS:
  • Remove drive cover. Remove belt from gearcase pulley by pushing down on pulley and rolling belt off it.
  • Turn lawn mower on its side. See engine manual for proper direction of turning over the engine.
  • Remove blade.
  • Remove belt from engine pulley on crankshaft.
  • Install new belt by reversing above steps.
  
NOTE: Always use factory approved belt to assure fit and long life.

“AUTO WALK” or “VARI-SPEED” MODELS:
- Remove drive cover and belt keeper.
- Remove belt from gearcase pulley by pushing down on pulley and rolling belt off it.
- Turn lawn mower on its side. See engine manual for proper direction of turning over the engine.
- Remove blade.
- Remove belt from engine pulley on crankshaft.
- Install new belt by reversing above steps.
  
NOTE: Always use factory approved belt to assure fit and long life.

OPERATION

The operation of any lawn mower can result in foreign objects thrown into the eyes, which can result in severe eye damage. Always wear safety glasses or eye shields while operating your lawn mower or performing any adjustments or repairs. We recommend standard safety glasses or a wide vision safety mask worn over spectacles.

HOW TO USE YOUR LAWN MOWER
ENGINE SPEED CONTROL
MODELS WITH REMOTE THROTTLE
Engine speed is controlled by the throttle control located on the upper handle.
- Move lever forward to FAST engine speed for starting and better bagging.
- Move lever backward for SLOW engine speed.
- Some models have engines equipped with a choke feature. Move the lever all the way forward to the CHOKE position when starting a cold engine.
  
NOTE: Be sure engine START/STOP switch (if equipped) is in the ON position.

MODELS WITH FIXED SPEED ENGINES
Engine speed was set at the factory for optimum performance. Engine speed is not adjustable.

TO ADJUST CUTTING HEIGHT
ALL MODELS:
Adjust cutting height to suit your requirements. Medium position is best for most lawns. Raise wheels for low cut and lower wheels for high cut.

NOTE: For shipping purposes, the rear wheels on your lawn mower may not be adjusted to the same position as the front wheels. Before operating mower adjust all wheels to the same cutting height.

“MANUAL” ADJUSTMENT
- Remove wheel, bolt, and hardware and reassemble in desired adjustment hole.
- Reinstall wheel components in the same order as they were before removal. Tighten securely.
- Make sure all wheels are at same height.

“QUICK” ADJUSTMENT
- To change cutting height, squeeze adjuster lever toward wheel. Move wheel up or down to suit your requirements. Be sure all wheels are in the same setting.
  
NOTE: Adjuster is properly positioned when plate tab inserts into hole in lever. Also, 9-position adjusters (if so equipped) allow lever to be positioned between the plate tabs.

LEVER FORWARD TO RAISE MOWER
LEVER BACKWARD TO LOWER MOWER

HOW TO USE YOUR LAWN MOWER
ENGINE SPEED CONTROL
MODELS WITH REMOTE THROTTLE
Engine speed is controlled by the throttle control located on the upper handle.
- Move lever forward to FAST engine speed for starting and better bagging.
- Move lever backward for SLOW engine speed.
- Some models have engines equipped with a choke feature. Move the lever all the way forward to the CHOKE position when starting a cold engine.
  
NOTE: Be sure engine START/STOP switch (if equipped) is in the ON position.

MODELS WITH FIXED SPEED ENGINES
Engine speed was set at the factory for optimum performance. Engine speed is not adjustable.

TO ADJUST CUTTING HEIGHT
ALL MODELS:
Adjust cutting height to suit your requirements. Medium position is best for most lawns. Raise wheels for low cut and lower wheels for high cut.

NOTE: For shipping purposes, the rear wheels on your lawn mower may not be adjusted to the same position as the front wheels. Before operating mower adjust all wheels to the same cutting height.

“MANUAL” ADJUSTMENT
- Remove wheel, bolt, and hardware and reassemble in desired adjustment hole.
- Reinstall wheel components in the same order as they were before removal. Tighten securely.
- Make sure all wheels are at same height.

“QUICK” ADJUSTMENT
- To change cutting height, squeeze adjuster lever toward wheel. Move wheel up or down to suit your requirements. Be sure all wheels are in the same setting.
  
NOTE: Adjuster is properly positioned when plate tab inserts into hole in lever. Also, 9-position adjusters (if so equipped) allow lever to be positioned between the plate tabs.

LEVER FORWARD TO RAISE MOWER
LEVER BACKWARD TO LOWER MOWER
“QUICK-PIN” ADJUSTMENT
- To change cutting height, pull up on adjuster lever, move wheel up or down to suit your requirements and release adjuster lever. Be sure all wheels are in the same setting.

**NOTE:** Adjuster is properly positioned when lever inserts into hole in plate.

**LEVER BACKWARD TO LOWER MOWER**

**LEVER FORWARD TO RAISE MOWER**

“DUAL POINT” ADJUSTMENT
Both front wheels are adjusted by a single lever on the left front wheel. Likewise, both rear wheels are adjusted by a single lever on the left rear wheel.
- Pull adjuster lever toward wheel. To raise mower, move lever forward to desired position. To lower mower, move the lever toward the rear.
Be sure to adjust both front and rear wheels to the same height.

**LEVER BACKWARD TO LOWER MOWER**

**LEVER FORWARD TO RAISE MOWER**

“SINGLE POINT” ADJUSTMENT
- Pull adjuster lever toward wheel. To raise mower, move lever forward to desired position. To lower mower, move the lever toward the rear.

**LEVER BACKWARD TO LOWER MOWER**

**LEVER FORWARD TO RAISE MOWER**

CAUTION: Before performing any service or adjustments:
- Release operator presence control bar.
- Make sure the blade and all moving parts have completely stopped.
- Disconnect spark plug wire from spark plug and place wire where it cannot come in contact with plug.

LAWN MOWER
TO ADJUST CUTTING HEIGHT
See “TO ADJUST CUTTING HEIGHT” in the Operation section of this manual.

REAR DEFLECTOR
The rear deflector, attached between the rear wheels of your mower, is provided to minimize the possibility that objects will be thrown out of the rear of the mower into the operator’s mowing position. If the deflector becomes damaged, it should be replaced.

DISCHARGE GUARD (IF EQUIPPED)
The discharge guard, attached to the side discharge opening of your lawn mower, is provided to prevent the possibility of injury resulting from objects being thrown out of the discharge opening into the operator mowing position. If the discharge guard becomes damaged, it should be replaced.

**TO ADJUST HANDLE**

“2 POSITION” HANDLES
The handle on your lawn mower has three (3) height positions - adjust to height that suits you.
- Remove knob and carriage bolt on one side of the lower handle.
- While holding handle assembly, remove knob and carriage bolt from opposite side, align hole in handle with desired hole in handle bracket and reassemble bolt and knob and tighten securely.
- Align opposite side of handle with same positioning hole and secure with bolt and knob.

**3 POSITION “EZ” HANDLES**
The handle on your lawn mower has three (3) height positions - adjust to height that suits you.
- Remove knob and carriage bolt on one side of the lower handle.
- While holding handle assembly, remove knob and carriage bolt from opposite side, align hole in handle with desired hole in handle bracket and reassemble bolt and knob and tighten securely.
- Align opposite side of handle with same positioning hole and secure with bolt and knob.
MAINTENANCE

WATER WASHOUT FEATURE
(IF EQUIPPED)
Your lawn mower may be equipped with a fitting that allows quick and easy cleaning of the underside of the housing. To use this feature, proceed as follows:
1. Move lawn mower to an area of cut grass or another hard surface.
2. Remove grass catcher and discharge chute assembly from lawn mower.
3. Close mulcher door (if equipped).
4. Connect a garden hose to the fitting where shown.
5. Turn on water supply and check for leaks at the fitting.
   If no leaks are present, start engine (as described in the Operation section of this manual) and let engine run for a full minute to remove excess water from mower.

CAUTION: Do not remove hose from fitting while engine is running. Water in engine can result in shortened engine life.

NOTE: Water, grass and other debris will drain from beneath the mower housing during the washout process.

NOTE: Be sure the garden hose is not routed under the lawn mower housing or entangled in the wheels.

GRASS CATCHER (IF EQUIPPED)
Grass catcher may be hosed with water but must be dry when used.

CAUTION: Under normal usage, the catcher material is subject to deterioration and wear and should therefore be checked to ensure compliance with original manufacturer specifications.

OPERATION

THREE POINT ADJUSTMENT
(18” (45cm) HI-VAC MODELS ONLY)
Both rear wheels are adjusted by a single lever on the left rear wheel.
- Pull adjuster lever toward wheel. To raise mower, move lever forward to desired position. To lower mower, move the lever toward the rear.

NOTE: There are seven (7) height adjustment positions for the rear wheels.
Both front wheels are adjusted as follows:
1. Remove wheel, bolt, and hardware and reassemble in desired adjustment hole.
2. Reinstall wheel components in the same order as they were before removal. Tighten securely.

NOTE: There are seven (7) height adjustment holes for the front wheels. Be sure both front wheels are in the same hole.

IMPORTANT: Be sure to adjust both front and rear wheels to the same height.

CASTER WHEEL OPERATION
(“THREE POINT” ADJUSTMENT ONLY)
The front wheels can be “locked” into position or set to “freewheel” for better maneuverability. Placing the lockbars in the outer holes of the adjustment brackets “locks” the front wheels. Likewise, placing the lockbars in the inner holes of the adjustment brackets allows the front wheels to spin freely (“freewheel”).
- Lift lockbar until the frontmost end clears the adjustment bracket, then pivot lockbar to desired position.

IMPORTANT: Front wheels must be “locked” into position when operating on a slope. Mow across the face of slopes: never up and down.

TO CONVERT MOWER:
Most mowers are shipped ready to be used as a mulcher.

REAR DISCHARGE ONLY” MOWERS
Some models have a separate mulcher plug, other models have the mulcher plug built into the rear door. To convert to bagging or discharging, the plate or plug (if so equipped) must be removed from the discharge opening of the lawn mower.
- Open rear door and remove mulcher plate or plug (if so equipped). Store mulcher plate or plug in a safe place.
- You can now install grass catcher or optional clipping deflector accessory.
- To return to mulching operation, install mulcher plate or plug into discharge opening of mower.
“SIDE DISCHARGE ONLY” MOWERS

MULCHER PLATE
To convert to bagging or discharging, mulcher plate must be removed from underside of lawn mower.
- Remove the four (4) screws and lock nuts securing the mulcher plate to the mower.
- Store mulcher plate and hardware in a safe place.
- Mower can now be used for side discharging or optional grass catcher accessory can be attached.
- To return to mulching operation, simply reinstall mulcher plug as shown, making sure tab is seated properly.

CAUTION: Do not run your lawn mower without discharge guard, approved grass catcher or mulcher plug in place.

MULCHER PLUG TYPE “A”
To convert to mulching operation, mulcher plug must be installed into discharge opening of mower.
- Open discharge guard.
- Insert tab of mulch plug into housing opening.
- Align hooks of mulch plug over hinge rod of discharge guard. Push mulch plug down until mulch plug is seated in housing opening.

CAUTION: Do not run your lawn mower without discharge guard, approved grass catcher or mulcher plug in place.

GEAR CASE
- To keep your drive system working properly, the gear case and area around the drive should be kept clean and free of trash build-up. Clean under the drive cover twice a season.
- The gear case is filled with lubricant to the proper level at the factory. The only time the lubricant needs attention is if service has been performed on the gear case.

ENGINE
Read the maintenance section of your engine manual.

LUBRICATION
Change the oil after the first two hours of operation and every 25 hours thereafter or at least once a year if the lawn mower is not used for 25 hours in one year. Refer to engine manual.

TO CHANGE ENGINE OIL (SEE ENGINE MANUAL)
- Be sure lawn mower is on level surface.
- Oil will drain more freely when warm.
- Catch oil in a suitable container.
- For engines without dipstick, remove bottom oil drain plug.
- For engines with oil fill cap/dipstick, remove bottom drain plug or remove engine oil cap and turn mower on its side.
- After oil has drained completely, replace oil drain plug and tighten securely.
- Refill engine with oil. Pour slowly. Do not overfill.
- Fill to top of slot inside of filler hole or to “FULL” line on dipstick on models so equipped. Keep oil at proper level.

AIR FILTER
Your engine will not run properly and may be damaged by using a dirty air filter. Clean the element after every 25 hours of operation or every season. Replace the air filter every 100 hours of operation or every season, whichever occurs first. Service air cleaner more often under dusty conditions. See the maintenance section of your engine manual.

IN-LINE FUEL FILTER (KOHLER ENGINES ONLY)
The fuel filter should be replaced once each season. If fuel filter becomes clogged, obstructing fuel flow to carburetor, replacement is required.
1. With engine cool, remove filter and plug fuel line sections.
2. Place new fuel filter in position in fuel line with arrow pointing towards carburetor.
3. Be sure there are no fuel line leaks and clamps are properly positioned.
4. Immediately wipe up any spilled gasoline.

MUFFLER
Inspect and replace corroded muffler as it could create a fire hazard and/or damage.

SPARK PLUG
Replace spark plug at the beginning of each mowing season or after every 100 hours of operation, whichever occurs first. Set spark plug gap according to engine manual specifications.

CLEANING
IMPORTANT: For best performance, keep mower housing free of grass build-up and trash. Clean the underside of your mower after each use.
- Clean the underside of your lawn mower by scraping to remove buildup of grass and trash.
- Keep finished surfaces and wheels free of all gasoline, oil, etc.
We do not recommend using a garden hose to clean your lawn mower unless the electrical system, muffler, air filter, and carburetor are covered to keep water out. Water in engine can shorten engine life.

CLEAN UNDER DRIVE COVER
Clean under the drive cover at least twice a season. Scrape underside of cover with a putty knife or similar tool to remove any buildup of trash or grass.
MAINTENANCE

BLADES WITH ROUND HOLE:
• To check blade balance, drive a nail into a beam or wall. Leave about one inch of the straight nail exposed. Place center hole of blade over the head of the nail. If blade is balanced, it should remain in a horizontal position. If either end of the blade moves downward, sharpen the heavy end until the blade is balanced.

BLADES WITH “STAR” HOLE:
• To check blade balance, you will need a 5/8” diameter steel bolt, pin, or a cone balancer. (When using a cone balancer, follow the instructions supplied with balancer.)

NOTE: Do not use a nail for balancing blade. The lobes of the center hole may appear to be centered, but are not.
• Slide blade on to an unthreaded portion of the steel bolt or pin and hold the bolt or pin parallel with the ground. If blade is balanced, it should remain in a horizontal position. If either end of the blade moves downward, sharpen the heavy end until the blade is balanced.

DRIVE WHEELS
Check drive wheels each time before you mow to be sure they move freely.
The wheels not turning freely means trash, grass cuttings, etc. are in the drive wheel area and must be cleaned to free drive wheels.
If necessary to clean the drive wheels, check both drive wheels.
• If after cleaning, the drive wheels do not turn freely, contact your nearest authorized service center.

18” (45cm) HI-VAC MODELS ONLY:
1. Remove hubcaps (if equipped) and locknuts.
2. Remove wheels from wheel adjuster axles.
3. Remove any trash or grass cuttings from inside the dust cover, pinion gear and drive wheel gear teeth.
4. If you remove the pinion gears, wipe clean with dry cloth. Reassemble dry. Do not lubricate. Do not use oil or grease.

IMPORTANT: The pinion gears (on both sides of the mower) are the same, however, they must be installed correctly. If installed incorrectly, the drive system will not work.
5. There are arrows embossed on both sides of the pinion gear. With the arrow at the top of the pinion, the arrow must point towards the front of the mower. If the arrow points to the rear of the mower, turn the pinion around, then assemble it to the mower.
6. Place wheels back on adjuster axles.
7. Replace locknuts and hubcaps.

OPERATION

“MULTI-CUT” MOWERS
Your lawn mower was shipped ready to be used as a mulcher. To convert to bagging or discharging:

REAR BAGGING
• Open rear door and remove mulcher plate or plug (if equipped). Store mulcher plate or plug in a safe place.
• You can now install grass catcher.
• To convert to mulching or discharging operation, install mulcher plate or plug (if equipped) into rear discharge opening of mower, making sure all tabs are seated properly. Close rear door.

SIDE DISCHARGING
• Mulcher plate or plug (if equipped) must be installed into rear discharge opening of mower. Rear door must be closed.
• Open mulcher door and install discharge deflector under door as shown.
• Mower is now ready for discharging operation.
• To convert to mulching or bagging operation, discharge deflector must be removed and mulcher door must be closed and locked.

“REAR DOOR PROP” (IF EQUIPPED)
(22PLUS MODELS ONLY)

NOTE: Rear door will remain open until operator presence control bar is held down to the handle.
ACALUTION: Do NOT force rear door to close. Serious damage to your mower could result.
**OPERATION**

**SIMPLE STEPS TO REMEMBER WHEN CONVERTING YOUR “MULTI-CUT” LAWN MOWER:**

**FOR MULCHING -**
- Rear mulcher plate or plug (if equipped) installed and rear door closed.
- Mulcher door closed.

**FOR REAR BAGGING -**
- Rear mulcher plate or plug (if equipped) removed.
- Grass catcher installed.
- Mulcher door closed.

**FOR SIDE DISCHARGING -**
- Rear mulcher plate or plug (if equipped) installed and rear door closed.
- Discharge deflector installed.

**CAUTION:** Do not run your lawn mower without rear mulcher plate or plug in place or approved grass catcher in place. Never attempt to operate the lawn mower with the rear door removed or propped open.

**TO EMPTY GRASS CATCHER (REAR DISCHARGE AND MULTI-CUT MODELS)**
- Simply open rear door and lift grass catcher up and away from mower.

**NOTE:** Do not drag the bag when emptying. It will cause unnecessary wear.

**CAUTION:** Under normal usage, the catcher material is subject to deterioration and wear and should, therefore, be checked frequently for replacement. Any replacement catcher should be checked to ensure compliance with original manufacturer’s specifications.

**CAUTION:** Do not run lawn mower without the rear door, approved grass catcher or clipping deflector in place. Never attempt to operate mower with the rear door removed or propped open.

---

**18" (45cm) HI-VAC MODELS:**

Your lawn mower was shipped ready to be used as a mulcher. To convert to rear bagging or side discharging:

**REAR BAGGING**
- Remove knob securing mulcher door to lawn mower housing.
- Open mulcher door and position discharge chute over both threaded studs.
- Secure discharge chute to lawn mower housing with both knobs.
- Place the grass catcher on the rear door as shown.

**NOTE:** Be sure the grass catcher is securely locked in place.
- Mower is now ready for rear bagging operation.

**SIDE DISCHARGING**
- Discharge chute must be removed.
- Open mulcher door and install side discharge deflector beneath it as shown.

---

**MAINTENANCE**

**LAWN MOWER**

Always observe safety rules when performing any maintenance.

**TIRES**
- Keep tires free of gasoline, oil, or insect control chemicals which can harm rubber.
- Avoid stumps, stones, deep ruts, sharp objects and other hazards that may cause tire damage.

**BLADE CARE**

For best results, blade must be kept sharp. Replace a bent or damaged blade.

**CAUTION:**
- Use only a replacement blade approved by the manufacturer of your mower. Using a blade not approved by the manufacturer of your mower is hazardous, could damage your mower and void your warranty.

**TO REMOVE BLADE**
- Disconnect spark plug wire from spark plug and place wire where it cannot come in contact with plug.
- Turn lawn mower on its side. Make sure air filter and carburetor are up.
- Use a wood block between blade and mower housing to prevent blade from turning when removing blade bolt.

**NOTE:**
- Protect your hands with gloves and/or wrap blade with heavy cloth.
- The recommended tightening torque is 35-40 ft. lbs.

**IMPORTANT:** Blade bolt is heat treated. If bolt needs replacing, replace only with approved bolt shown in the Repair Parts section of this manual.

**TO SHARPEN BLADE**

**NOTE:** We do not recommend sharpening blade - but if you do, be sure the blade is balanced. An unbalanced blade will cause eventual damage to lawn mower or engine.
- The blade can be sharpened with a file or on a grinding wheel. Do not attempt to sharpen while on the mower.

* (if so equipped)
** Electric-Start mowers
*** Power-Propelled mowers
**** Mulching mowers

1. - Change more often if operating under a heavy load or in high outdoor temperatures.
2. - Service more often if operating in dirty or dusty conditions.
3. - Replace blades more often when mowing in sandy soil.
4. - Charge 48 hours at end of season.
5. - And after each 5 hours of use.

**GENERAL RECOMMENDATIONS**

The warranty on this lawn mower does not cover items that have been subjected to operator abuse or negligence. To receive full value from the warranty, operator must maintain mower as instructed in this manual. Some adjustments will need to be made periodically to properly maintain your unit. All adjustments in the Service and Adjustments section of this manual should be checked at least once each season. 
- Once a year, replace the spark plug, clean or replace air filter element, and check blade for wear. A new spark plug and clean/new air filter element assures proper air-fuel mixture and helps your engine run better and last longer.
- Follow the Maintenance Schedule in this manual.

**BEFORE EACH USE**

- Check engine oil level.
- Check for loose fasteners.

**LUBRICATION**

Keep unit well lubricated (See “LUBRICATION CHART”).

**IMPORTANT:** Do not oil or grease plastic wheel bearings. Viscous lubricants will attract dust and dirt that will shorten the life of the self-lubricating bearings. If you feel they must be lubricated, use only a dry, powdered graphite type lubricant sparingly.

**LUBRICATION CHART**

- Wheel adjuster (on each wheel)
- Engine oil
- Side discharge mower guard hinge rod
- Rear discharge mower rear door hinge rod
- Handle bracket mounting pins

**OPERATION**

3. Secure rear of side discharge deflector to lawn mower housing with knob.
- Mower is now ready for side discharging operation.

**SIMPLE STEPS TO REMEMBER WHEN CONVERTING YOUR 18” HI-VAC:**

- **FOR MULCHING** -
  1. Grass catcher, discharge chute and side discharge deflector removed.
  2. Mulcher door secured to mower housing with knob.

- **FOR REAR BAGGING** -
  1. Side discharge deflector removed.
  2. Grass catcher and discharge chute installed with discharge chute secured to lawn mower housing with knob.

- **FOR SIDE DISCHARGING** -
  1. Grass catcher and discharge chute removed.
  2. Side discharge deflector installed and secured to mower housing with knob.

**CAUTION:** Do not run your lawn mower without mulcher door closed; side discharge deflector installed, or discharge chute and approved grass catcher in place. Never attempt to operate the lawn mower with mulcher door removed or propped open.

**TO EMPTY GRASS CATCHER**

1. Remove grass catcher with clippings from lawn mower using both front and center of handle as shown.
2. Empty clippings from grass catcher.
3. Reinstall grass catcher on rear door.

**NOTE:** Do not drag the bag when emptying; it will cause unnecessary wear.

**21” (53cm) HI-VAC MODELS:**

Your lawn mower was shipped ready to be used as a mulcher. To convert to rear bagging or side discharging:

- **REAR BAGGING**
  1. Remove knob securing mulcher door to lawn mower housing.

- **SIDE DISCHARGING**
  1. Grass catcher and discharge chute removed.
  2. Side discharge deflector installed and secured to mower housing with knob.

- **SIDE DISCHARGING**
  1. Grass catcher and discharge chute removed.
  2. Side discharge deflector installed and secured to mower housing with knob.

- **SIDE DISCHARGING**
  1. Grass catcher and discharge chute removed.
  2. Side discharge deflector installed and secured to mower housing with knob.
3. Secure rear of discharge chute to lawn mower housing with knob.
4. Place rear handle of grass catcher on the crossbar of the lawn mower's lower handle as shown.
5. Lift the round door of the discharge chute and place the grass catcher into place on the discharge chute.

NOTE: Be sure the grass catcher is securely locked in place and the round door of the discharge chute rests on the grass catcher as shown.
- Mower is now ready for rear bagging operation.
- To convert to mulching operation, remove grass catcher and discharge chute. Secure mulcher door to mower housing with knob.
- To convert to side discharging operation, remove grass catcher and discharge chute. Install side discharge deflector and secure it to lawn mower housing with knob.

SIDE DISCHARGING
1. Grass catcher and discharge chute must be removed.
2. Open mulcher door and install front of side discharge deflector beneath it as shown.
3. Secure rear of side discharge deflector to lawn mower housing with knob.
- Mower is now ready for side discharging operation.
- To convert to mulching operation, side discharge deflector must be removed and mulcher door secured to mower housing with knob.
- To convert to rear bagging operation, side discharge deflector must be removed; discharge chute and grass catcher installed and discharge chute secured to mower housing with knob.

TO EMPTY GRASS CATCHER
1. Open round door of discharge chute to move starter rope out and away from grass catcher.
2. Remove grass catcher with clippings from lawn mower using both front and rear handles.
3. Empty clippings from grass catcher using rear handle. The weight of the grass will open the door.
4. Snap door shut over frame before installing grass catcher on mower.

NOTE: Do not drag the bag when emptying; it will cause unnecessary wear.

MOWING TIPS

FOR MULCHING -

- Do not use de-thatcher blade attachments on your mower. Such attachments are hazardous, will damage your mower and could void your warranty.
- For most cutting conditions and better bagging performance, the engine speed should be set in the FAST position.
- Under certain conditions, such as when mowing very tall grass, raise the mower height on the first cut to reduce pushing effort, to avoid overheating the engine, and to avoid leaving clumps of grass clippings. Make the second cut to the desired height.
- For extremely heavy cutting, reduce the width of cut.
- For side discharge lawn mowers, cut in a counterclockwise direction, starting at the outside of the area to be cut, in order to spread grass clippings more evenly and to put less load on the engine. To keep clippings off of walkways, flower beds, etc., make the first cuts in a clockwise direction.
- When using a rear discharge lawn mower in moist, heavy grass, clumps of cut grass may not enter the grass catcher. Reduce ground speed (pushing speed) and/or run the lawn mower over the area a second time.
- If a trail of grass clipping is left on the right side of a rear discharge lawn mower, mow in a clockwise direction with a small overlap to collect the clippings on the next pass.
- Pores in cloth grass catchers can become filled with dirt and dust with use and the catcher will collect less grass. To prevent this, regularly hose catcher off with water and let dry before use.

FOR SIDE DISCHARGING -

- Do not run your lawn mower without mulcher door closed; side discharge deflector installed, or discharge chute and approved grass catcher in place. Never attempt to operate the lawn mower with mulcher door or round door removed or propped open.
- Change your cutting pattern from week to week. Mow north to south one week then change to east to west the next week. This will help prevent matting and graining of the lawn.
- Certain types of grass and grass conditions may require that an area be mulched a second time to completely hide the clippings. When doing a second cut, mow across (perpendicular) to the first cut path.
- If a trail of grass clipping is left on the right side of a rear discharge lawn mower, mow in a clockwise direction with a small overlap to collect the clippings on the next pass.

FOR REAR BAGGING -

- Certain types of grass and grass conditions may require that an area be mulched a second time to completely hide the clippings. When doing a second cut, mow across (perpendicular) to the first cut path.
- Change your cutting pattern from week to week. Mow north to south one week then change to east to west the next week. This will help prevent matting and graining of the lawn.

- Pores in cloth grass catchers can become filled with dirt and dust with use and the catcher will collect less grass. To prevent this, regularly hose catcher off with water and let dry before use.

MOWING TIPS

FOR MULCHING -

- Do not use de-thatcher blade attachments on your mower. Such attachments are hazardous, will damage your mower and could void your warranty.
- For most cutting conditions and better bagging performance, the engine speed should be set in the FAST position.
- Under certain conditions, such as when mowing very tall grass, raise the mower height on the first cut to reduce pushing effort, to avoid overheating the engine, and to avoid leaving clumps of grass clippings. Make the second cut to the desired height.
- For extremely heavy cutting, reduce the width of cut.
- For side discharge lawn mowers, cut in a counterclockwise direction, starting at the outside of the area to be cut, in order to spread grass clippings more evenly and to put less load on the engine. To keep clippings off of walkways, flower beds, etc., make the first cuts in a clockwise direction.
- When using a rear discharge lawn mower in moist, heavy grass, clumps of cut grass may not enter the grass catcher. Reduce ground speed (pushing speed) and/or run the lawn mower over the area a second time.
- If a trail of grass clipping is left on the right side of a rear discharge lawn mower, mow in a clockwise direction with a small overlap to collect the clippings on the next pass.
- Pores in cloth grass catchers can become filled with dirt and dust with use and the catcher will collect less grass. To prevent this, regularly hose catcher off with water and let dry before use.
OPERATION

BEFORE STARTING ENGINE
Read the engine manual packed with your mower.

FILL ENGINE WITH OIL
Your lawn mower is shipped without oil in the engine.
- Be sure mower is level and area around oil fill is clean.
- Remove engine oil filler plug (oil fill cap/dipstick on models so equipped).
- Slowly add oil. For type and grade of oil to use, see “ENGINE” in the Maintenance section of this manual.
- Fill to the top of slot in filler hole (to “FULL” line on dipstick on models so equipped). Do not overfill.
- Replace plug (oil fill cap/dipstick on models so equipped) and tighten.
- Check oil level before each use. Add oil as needed.
- To change oil, see Maintenance section of this manual.

FILL GASOLINE TANK
- Fill gasoline tank with fresh, clean, unleaded gasoline. DO NOT USE PREMIUM GASOLINE. BE CAREFUL NOT TO OVERFILL TANK.

WARNING: Alcohol blended fuels (called gasohol or using ethanol or methanol) can attract moisture which leads to separation and formation of acids during storage. Acidic gas can damage the fuel system of an engine while in storage. To avoid engine problems, the fuel system should be emptied before storage of 30 days or longer. Drain the fuel tank, start the engine and let it run until fuel lines and carburetor are empty. Use fresh fuel next season. See Storage Instructions for additional information. Never use engine or carburetor cleaner products in fuel tank or permanent damage may occur.

TO START ENGINE
\textbf{CAUTION:} The mower blade rotates whenever the engine is running.

\textbf{NOTE:} Due to protective coatings on the engine, a small amount of smoke may be present during the initial use of the product and should be considered normal.
- Place engine START/STOP switch (if equipped) in the ON position.
- Move engine speed control to FAST position (or to CHOKE/START position on models equipped with choke feature).
- If your mower has a primer, to start a cold engine, push primer as many times as instructed in the engine manual packed with your mower. Use a firm push. This step is not usually necessary when starting an engine which has already run for a few minutes.
- Hold operator presence control bar down against handle.

\textbf{MODELS WITH RECOIL STARTER}
- Pull starter handle quickly. Do not allow starter rope to snap back.

\textbf{WARNING:} Federal regulations require an engine control to be installed on this lawn mower in order to minimize the risk of blade contact injury. Do not under any circumstances attempt to defeat the function of the operator control. The blade turns when the engine is running.

\textbf{TO STOP ENGINE}
- To stop engine, release operator presence control bar and/or place engine START/STOP switch (if equipped) in the OFF position.

\textbf{NOTE:} For engines with a primer, it may be necessary to repeat priming steps in cooler weather. In warmer weather, overpriming may cause flooding and engine will not start. If you do flood engine, wait a few minutes before attempting to start and DO NOT repeat priming steps.
**OPERATION**

**“DUAL BAIL” DRIVE CONTROL**
- To start forward motion, lift drive control bar up to handle.
- To stop forward motion, release drive control bar.

**“AUTOWALK” DRIVE CONTROL**
- Self-propelling is controlled by holding the operator presence control bar down to the handle and pulling the drive control lever(s) rearward to the handle. The farther toward the handle the lever(s) are pulled, the faster the unit will travel.
- Forward motion will stop when either the operator presence control bar or a drive control lever are released. To stop forward motion without stopping engine, release the drive control lever(s) only.
- Hold operator presence control bar down against handle to continue mowing without self-propelling.

**NOTE:** If after releasing the drive control the mower will not roll backwards, push the mower forward slightly to disengage drive wheels.

**FRONT WHEEL DRIVE MODELS ONLY:**
- To keep drive control engaged when turning corners, push down on the handle to lift the front wheels off the ground while turning lawn mower.

**“VARI-SPEED” DRIVE CONTROL**
- Self-propelling is controlled by holding the operator presence control bar down to the handle and pulling the drive control bar up to the handle. The closer to the handle the bar is pulled, the faster the unit will travel.
- Forward motion will stop when either the operator presence control bar or drive control bar are released. To stop forward motion without stopping engine, release the drive control bar only.
- Hold operator presence control bar down against handle to continue mowing without self-propelling.

**NOTE:** If after releasing the drive control the mower will not roll backwards, push the mower forward slightly to disengage drive wheels.

**FRONT WHEEL DRIVE MODELS ONLY:**
- To keep drive control engaged when turning corners, push down on the handle to lift the front wheels off the ground while turning lawn mower.

**OVER TIME, THE DRIVE CONTROL SYSTEM MAY BECOME “LOOSE”, RESULTING IN DECREASED SPEED.**

- There is a turnbuckle on the underside of the drive control housing to increase tension on the drive cable. Proceed as follows:
  - Turn unit off and disconnect spark plug wire from spark plug.
  - Turn nut on underside of drive control to increase drive speed.
  - Operate mower to test drive speed.

**ADJUSTMENT:**
- Readjust as required.

**IF CONDITION FAILS TO IMPROVE AFTER THE ABOVE STEPS (FORWARD SPEED REMAINS THE SAME), YOUR DRIVE BELT IS WORN AND SHOULD BE REPLACED.**
