**FOR BEST RESULTS:** Apply MOSS OUT! FOR ROOFS AND STRUCTURES DRY FORMULA just prior to the time when fall rains begin or in early spring. Moss growth may occur in nearly any location where dampness persists. Such areas include roofs, patios, sidewalks and foundations. Since moisture is essential, most moss growth appears during the fall, some in the winter and in the spring. Very little moss forms in summertime.

**PREVENTIVE TREATMENT:** For preventing moss growth, or for use after sweeping or otherwise removing as much moss as possible.

**1. MOSS OUT! FOR ROOFS AND STRUCTURES DRY FORMULA**
can be applied directly from container as a powder. Apply at the rate of 6 lbs. to 1200 square feet of area.

**2. To apply as spray, use a sprinkling can or tank sprayer. Slowly add 6 lbs. MOSS OUT! FOR ROOFS AND STRUCTURES DRY FORMULA to 10 gallons of water (1 lb. to 1 3/4 gallons), stirring continuously. Spray to thoroughly wet surface, using 1 gallon of mixture to 300 sq. ft. of area. NOTE: Do not mix more product than you can use at one time. Do not store mixed solution in tank sprayer or sprinkling can. Damage may occur.**

**3. Repeat treatment as necessary (when new moss growth begins to appear).**

**FOR DESTRUCTION OF HEAVY MOSS GROWTH:** Where it is impractical to first remove moss by sweeping or other means, as indicated under PREVENTIVE TREATMENT.

**3. On roofs, apply liberally to higher portions of roof moss. This allows rain to move some of the treatment material down through the moss patches.**

**4. After three to five weeks, depending on thickness of moss growth, the dead moss may be hosed, swept, or raked off the treated area.**

**5. PREVENTIVE TREATMENT with MOSS OUT! FOR ROOFS AND STRUCTURES DRY FORMULA should be made immediately to the cleared area with repeat treatments just prior to the time the fall rains begin, or in early spring.**
