

build a firepit

Go for the glow with an easy to install backyard firepit

build a firepit

MATERIALS

- Steel Fire Bowl (637988)
- 2x6 lumber
- Sand
- River rocks
- Galvanized screws

TOOLS

- Miter saw
- Power drill/screwdriver
- Screwdriver bits

SKILL LEVEL

Beginner

1 Use four 2x6s to create 6-inch deep support frame of 54-inches per side. Use four more 2x6s to create 6-inch-wide decorative ledge with 54-inch square outer dimensions. Use mitered

ends so corners conjoin neatly. Screw decorative ledge flush onto support frame with non-rusting galvanized screws. If desired, paint or stain exterior surfaces before proceeding to next step.

2 Lie frame on flat surface. Fill two-thirds full with

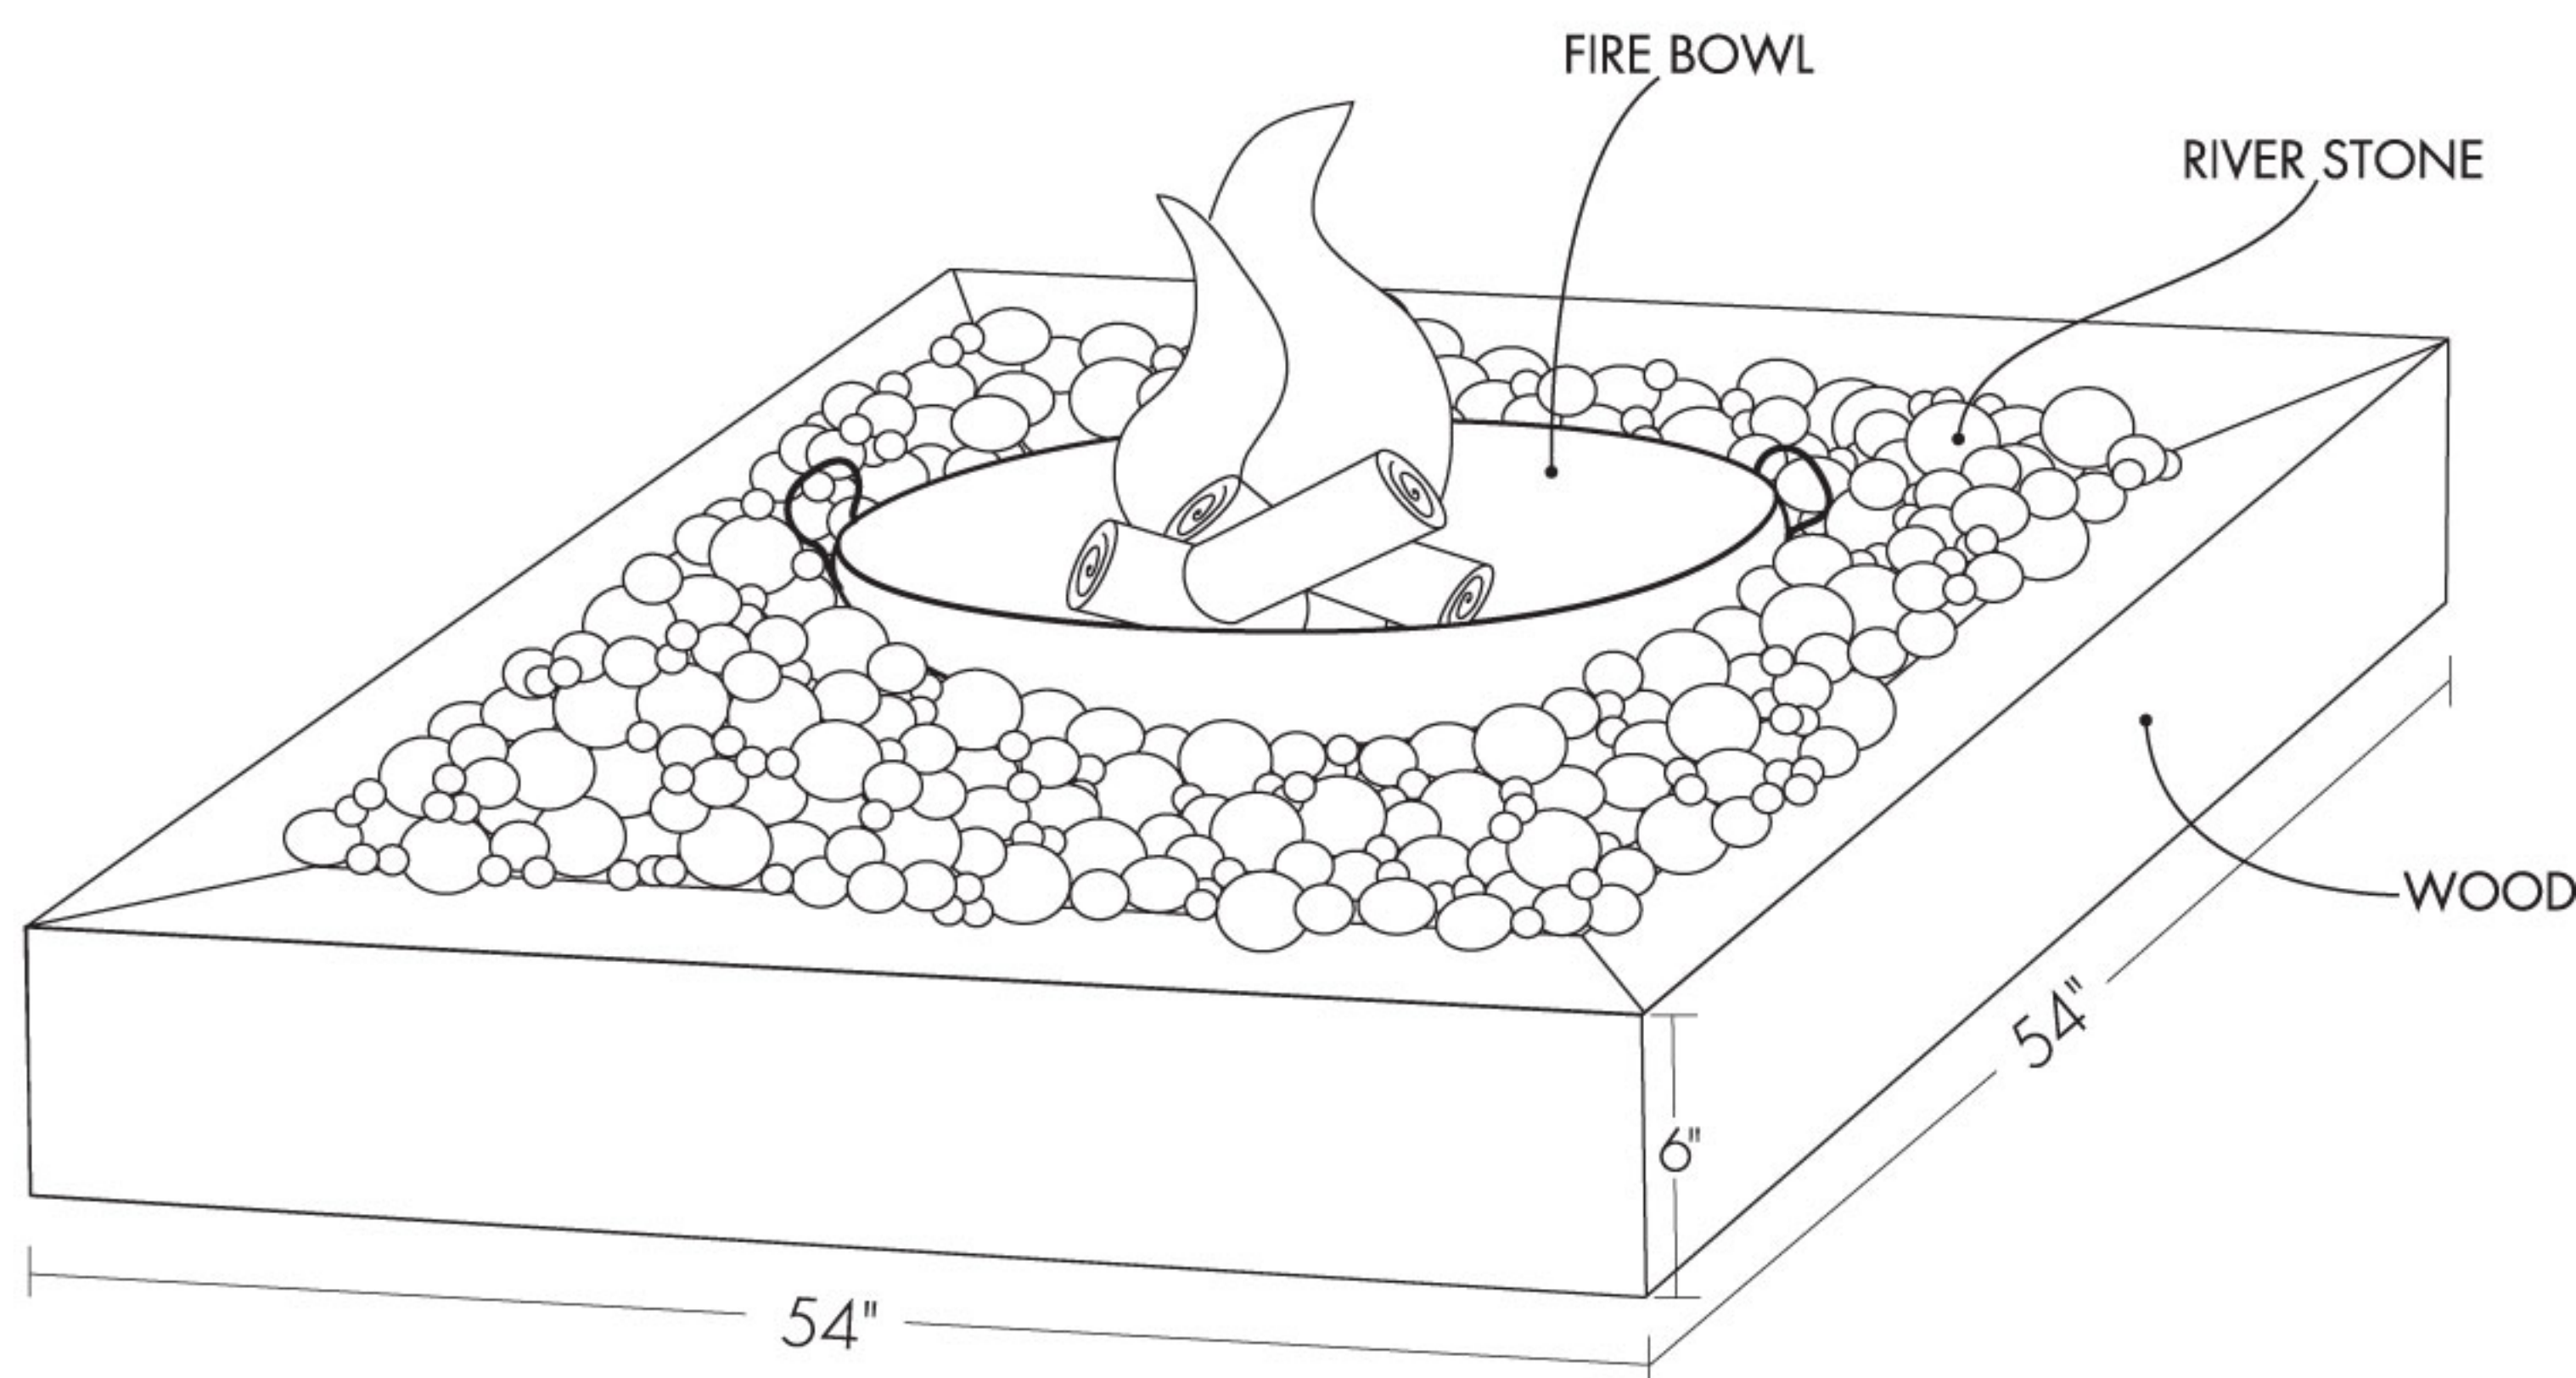

sand. Smooth sand until level.

3 Settle steel fire bowl into sand and add additional sand around bowl until securely nestled.

4 Cover sand with decorative layer of river rocks.

TIP Use these professional stylist tricks to enhance the look of your firepit:

- Pick up the glow with lanterns and tea lights spread throughout your backyard.
- Gazing balls and garden mirrors will also reflect the fire's natural glow.
